Supplemental Directives

Read this document and retain it for future reference. Before assembling, installing, operating, or maintaining the product, ensure that you fully understand the instructions and risks. Observe all safety instructions. Failure to follow the instructions in this document may result in serious injury and/or property damage.
This document is subject to change without notice.
These supplemental directives explain how safety information is laid out in this document and what content it covers.

Safety Chapter
This document's Safety chapter is designed to give the reader a basic understanding of safety. It illustrates general hazards and gives strategies on how to avoid them.

Safety Guide
The external Safety Guide is designed to give the reader a basic understanding of safety. It illustrates general hazards and suggests strategies on how to avoid them.

Warnings
This document uses the following warnings to indicate hazardous situations:

Symbol	Category	Meaning	Remark
⚠	WARNING	Designates a situation that can lead to death or serious (irreversible) injury.	The warnings contain information on how to avoid the hazard.
⚠	CAUTION	Designates a situation that can lead to slight or moderate (reversible) injury.	
None	NOTICE	Designates a situation that can lead to property or environmental damage.

EU Declaration of Conformity

Table of Contents

Always Read and Observe the Safety Instructions!
The device is constructed in accordance with the latest technology and generally accepted safety rules and regulations.
Under certain circumstances, however, usage may pose risks to users or cause damage to the device.

Commissioning must be carried out by specialist personnel authorized by the operating company. If safe operation is not possible, the device must not be switched on or, if it is already on, must be switched off properly and secured against unintended operation.
Reasons to assume safe operation is not possible:

- the device shows visible damage
- failure to perform the intended function
- prolonged storage at temperature of below -30 °C/-22 °F or above 70 °C/158 °F
- severe transport stresses

Before recommissioning the device, a professional routine test must be performed. This test should be carried out by the manufacturer at its factory.

Intended Use

Stratos Pro A201MSPH is a 2-wire device for pH/mV, ORP, and temperature measurement using Memosens sensors in industrial, environmental, food, and wastewater applications.
Stratos Pro A201X and the separately approved Ex sensor may be operated in Zone 0 / Division 1.
Stratos Pro A201B and the separately approved Ex sensor may be operated in Zone 2.

The defined rated operating conditions must be observed when using this product. They can be found in the Specifications chapter of this User Manual; see page 112.

Function Check Mode (HOLD Function)
After activating configuration, calibration, or service, Stratos Pro enters function check mode (HOLD).
The current outputs respond in accordance with the configuration. Operations must not be carried out while Stratos Pro is in function check (HOLD) mode, as the system may behave unexpectedly and put users at risk.

Control Drawings
If installing in hazardous locations, observe the information provided on the included Control Drawings.

Devices Not Intended for Use in Hazardous Locations
Devices identified with an N in their product name must not be used in hazardous locations.

Configuration
Replacing components may affect intrinsic safety. The modules are not intended to be replaced on devices in the Stratos Pro A201 product line.

Housing and Mounting Options

- The sturdy molded enclosure is designed for IP66/IP67 / TYPE 4X Outdoor protection, is made of PBT glass fiber reinforced PC, and has the following dimensions: H 148 mm, W 148 mm, T 117 mm. Knockouts in the housing enable
- wall mounting (with sealing plugs to seal the housing) see page 14
- pipe mounting (Ø 40 … 60 mm, ☐ 30 … 45 mm) see page 15
- panel mounting (cutout 138 mm x 138 mm acc. to DIN 43700) see page 16

Protective Hood (Accessory)

The protective hood, which is available as accessory, provides additional protection against direct weather exposure and mechanical damage; see page 15.

Connection of Sensors, Cable Glands

For connecting the cables, the enclosure provides

- 3 knockouts for M20x1.5 cable glands
- 2 knockouts for ½" conduit

For quasi-stationary installations with Memosens sensors, we recommend using the M12 socket accessory (ZU0822) instead of a cable gland – which allows simple replacement of the sensor cable without opening the device.

Sensors

The device has been designed for application with Memosens sensors.

Display
Plain-text messages on a large, backlit LC display enable intuitive operation. You can specify which values are to be displayed in standard measuring mode ("Main Display," see page 27).

Color-Coded User Interface
The colored display backlighting indicates different operating states (e.g., alarm: red, HOLD mode: orange; see page 28). The display backlighting can be switched off; see page 78.

Diagnostic Functions
"Sensocheck" automatically monitors the glass and reference electrodes; and the "Sensoface" function clearly indicates the sensor condition; see page 138.

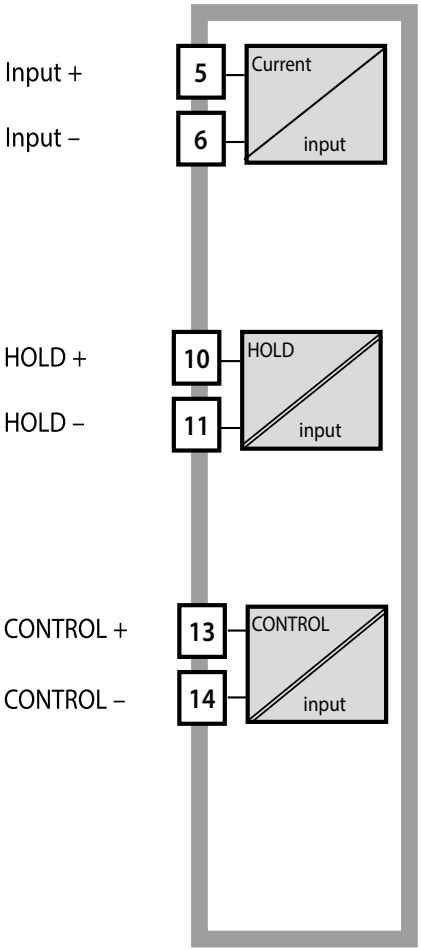
Data Logger
The internal logbook (TAN SW-A002) can handle up to 100 entries – up to 200 with AuditTrail (TAN SW-A003); see page 103.

Two Parameter Sets A, B
The device provides two parameter sets that can be switched manually or via a control input for different process connections or different process conditions.
For an overview of parameter sets (original for copy), see page 42.

Password Protection
Password protection (passcodes) for granting access rights during operation can be configured; see page 107.

Automatic Calibration with Calimatic
You can choose from the most commonly used buffer solutions, see page 117.
A custom buffer set can also be entered; see page 130.

Control Inputs (TAN SW-A005)



I input
The analog (0) 4 ... 20 mA current input can be used for external temperature compensation; see page 68.

HOLD
(Floating digital control input)
The HOLD input can be used for external activation of HOLD mode; see page 31.

CONTROL
(Floating digital control input)
The CONTROL input can be used either for parameter set selection (A/B) or for flow monitoring; see page 70.

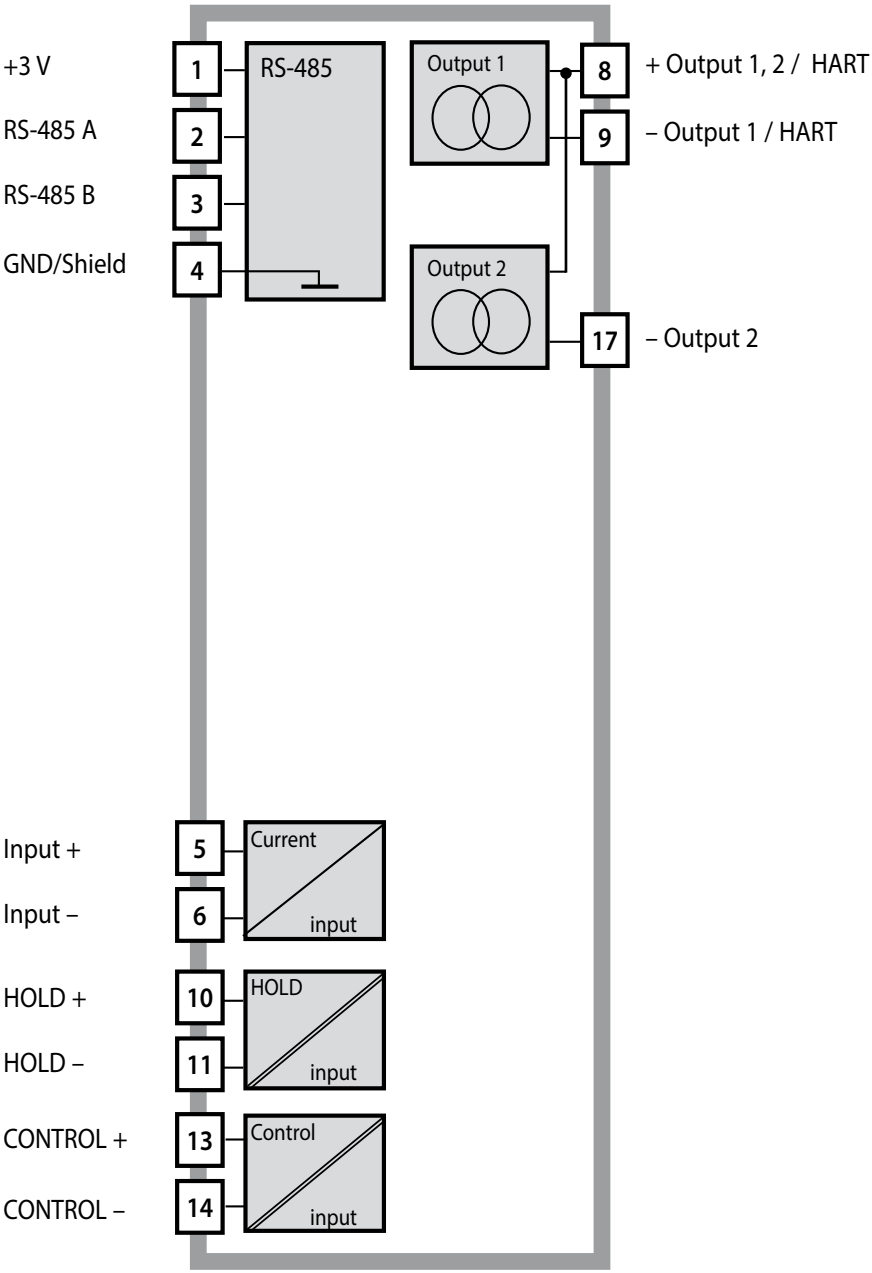
Signal Outputs

The device provides two current outputs (for transmission of measured value and temperature, for example).

Options

Additional functions can be enabled by entering a TAN (p. 107).

Overview of Stratos Pro A201MSPH



Package Contents

Note: Check all components for damage upon receipt.
Do not use damaged parts.

The package should contain:

- Front unit, rear unit, bag containing small parts
- Specific test report
- Documentation (see page 3)

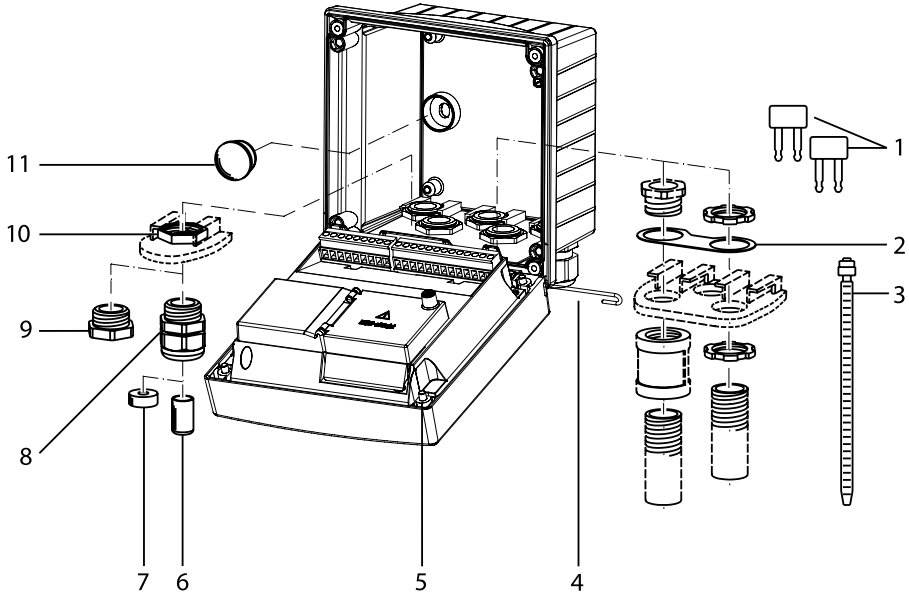


Fig.: Assembling the enclosure

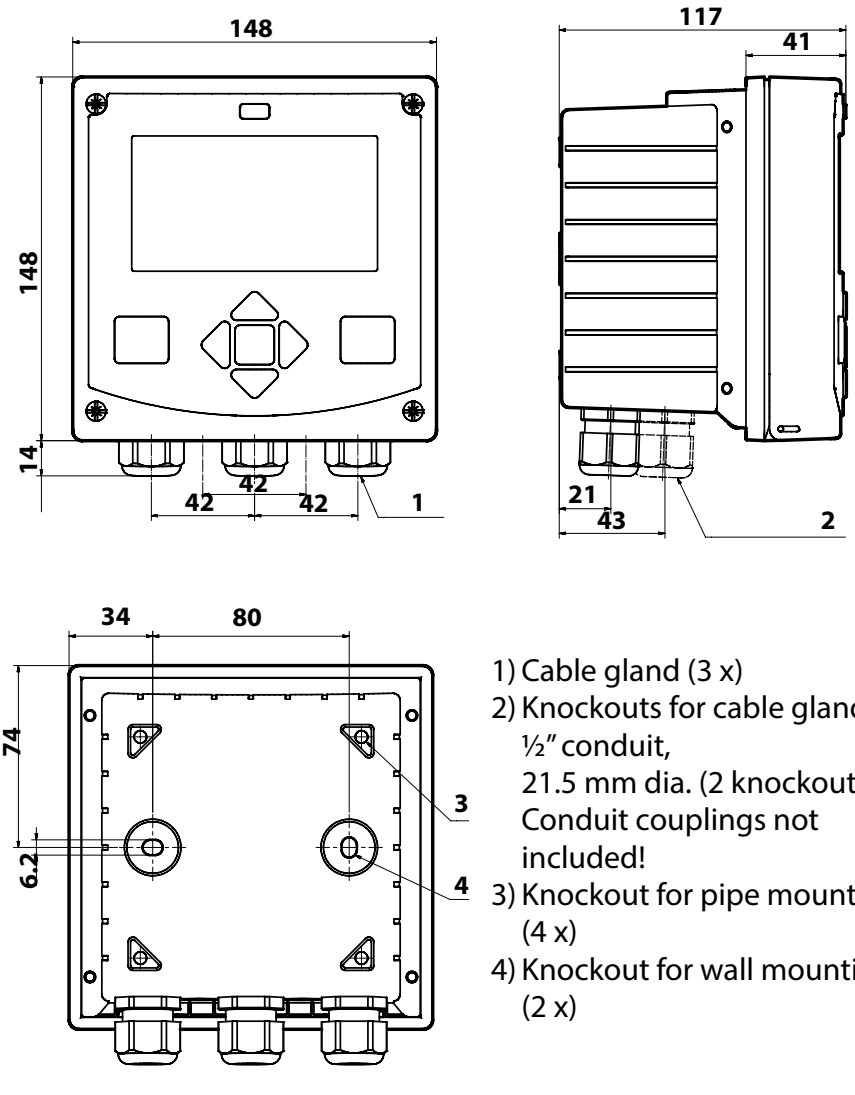
1) Insertable jumper (3x)
2) Plate (1x), for conduit mounting: Plate between housing and nut
3) Cable tie (3x)
4) Hinge pin (1x), insertable from either side
5) Enclosure screw (4x)
6) Blanking plug (2x, non-Ex only)
7) Reduction sealing insert (1x)
8) Cable gland (3x)
9) Blanking cap (2x)
10) Hex nut (5x)
11) Plastic sealing plug (2x), for sealing in case of wall mounting

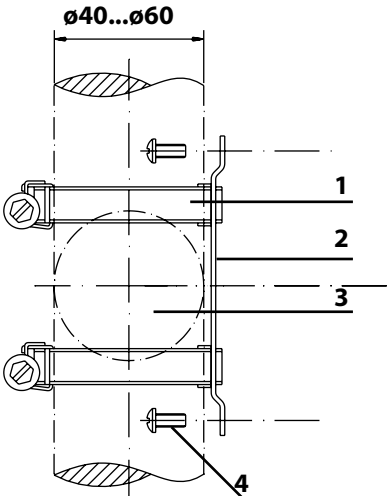
Mounting Plan, Dimensions



1) Cable gland (3 x)
2) Knockouts for cable gland or ½" conduit, 21.5 mm dia. (2 knockouts) Conduit couplings not included!
3) Knockout for pipe mounting (4 x)
4) Knockout for wall mounting (2 x)

Fig.: Mounting plan (All dimensions in mm!)

Pipe Mounting, Protective Hood



1) Hose clamp with worm gear drive to DIN 3017 (2 x)
2) Pipe-mount plate (1 x)
3) For vertical or horizontal posts or pipes
4) Self-tapping screw (4 x)

Fig.: Pipe-mount kit, accessory ZU 0274 (All dimensions in mm!)

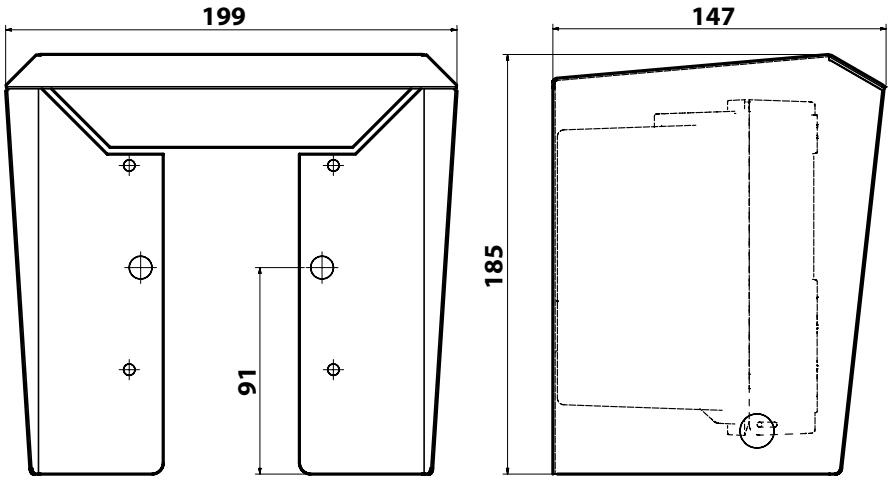


Fig.: Protective hood for wall and pipe mounting, accessory ZU 0737 (All dimensions in mm!)

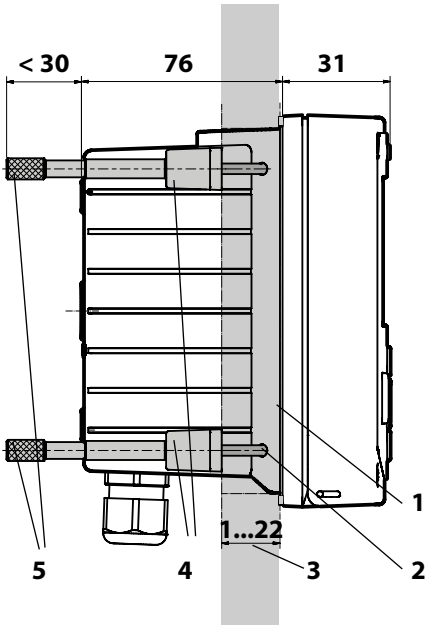
Panel Mounting



1) Circumferential sealing (1 x)
2) Screws (4 x)
3) Position of control panel
4) Span piece (4 x)
5) Threaded sleeve (4 x)

Cutout
138 x 138 mm (DIN 43700)

Fig.: Panel-mount kit, accessory ZU 0738 (All dimensions in mm!)

Before commencing with the installation, make sure that all lines to be connected are de-energized.
Observe the safety instructions; see page 7.

Cable Glands

In a hazardous location, only cable glands with suitable approvals may be used. The installation instructions of the manufacturer must be observed.

Cable glands	5 cable glands M20 x 1.5 A/F 24 mm
	WISKA type ESKE/1 M20
Clamping ranges	Standard sealing insert: 7 … 13 mm
	Reduction sealing insert: 4 … 8 mm
	Multiple sealing insert: 5.85 … 6.5 mm
Tensile strain	Not permitted; Only suitable for "fixed installation"

⚠ **CAUTION!** Risk of losing the specified ingress protection.
Fasten the cable glands and screw together the housing correctly.
Observe the permissible cable diameters and tightening torques.
Only use original accessories and spare parts.

NOTICE! Strip the insulation from the wires using a suitable tool to prevent damage. For stripping length, see Specifications.

1) Wire the current outputs. Deactivate unused current outputs in the parameter settings or use jumpers.
2) Wire the inputs as necessary.
3) Connect the sensor.
4) Check whether all connections are correctly wired.
5) Close the housing and successively tighten the enclosure screws in a diagonal pattern.

Rating Plates / Terminal Assignments

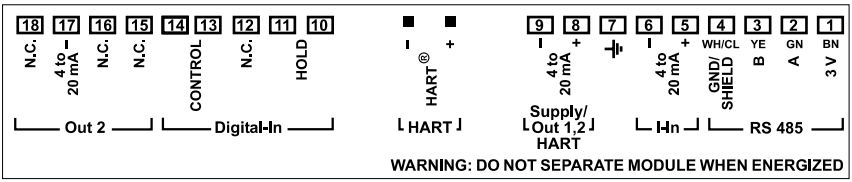


Fig.: Terminal assignments of Stratos Pro A2...

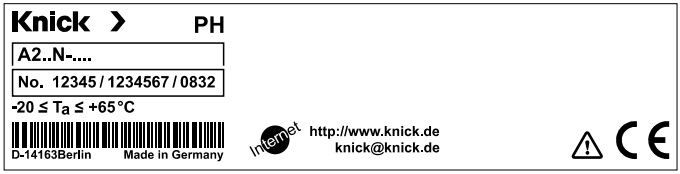

Fig.: Stratos Pro A2...N rating plate at outside bottom of front (illustrative example)

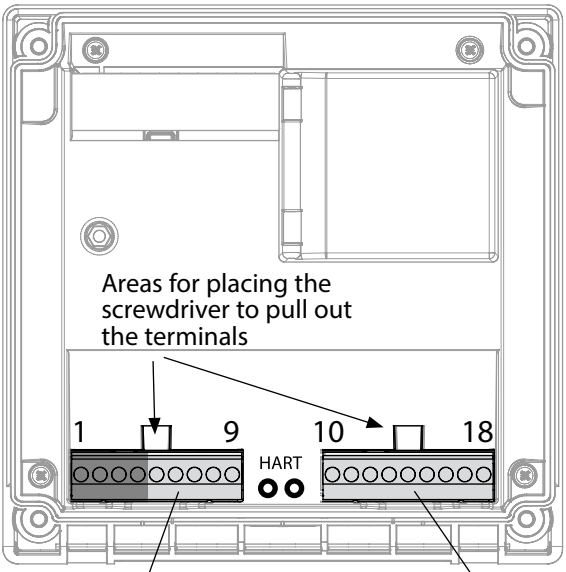
Wiring of Stratos Pro A201 MSPH



Terminal row 1

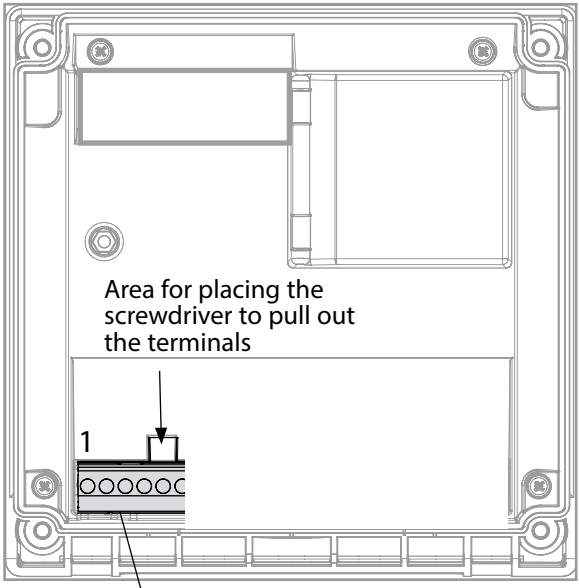
Connecting a Memosens Sensor



Memosens connection:		Wire color
1	+ 3 V	Brown
2	RS 485 A	Green
3	RS 485 B	Yellow
4	GND/shield	White, transparent shield

The Memosens sensor is connected to the RS-485 interface of the device. When the sensor is selected in the Configuration menu, the default values are taken as calibration data. They can then be modified by calibration.

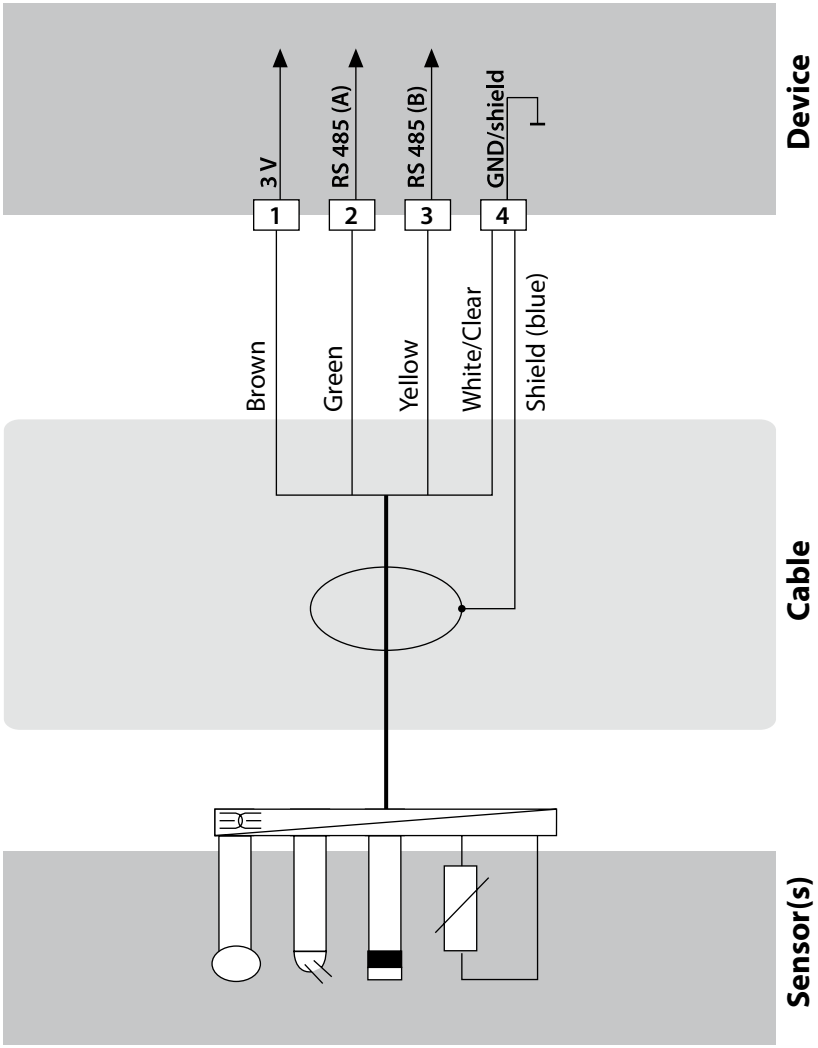
***NOTICE!* The measuring module slot must be empty!**
Stratos Pro A201MSPH is intended for connecting a Memosens sensor via RS-485 interface. It does not provide a measuring module.

Example 1:

Measuring task: pH/ORP, temp, glass impedance, ref. impedance

Sensors (example): SE 533/1-ADIN

Cable (example): CA/003-NAADIN11



Example 2:

Measuring task: pH/ORP, temp, glass impedance

Sensors (example): SE531/1-NMSN

Cable (example): Memosens cable CA/MS-003NAA-L

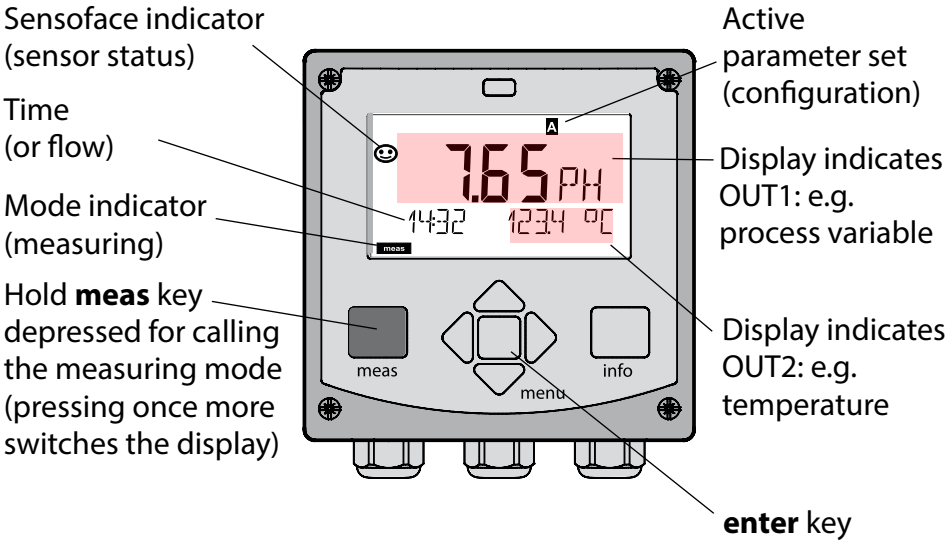
Turquoise	Diagnostics
Green	Info
Magenta	Sensoface message

After the operating voltage has been connected, the analyzer automatically goes to "Measuring" mode. To call the measuring mode from another operating mode (e.g. Diagnostics, Service): Hold **meas** key depressed (> 2 s).



Depending on the configuration, one of the following displays can be set as standard display for the measuring mode (see page 27):

- Measured value, time and temperature (default setting)
- Measured value and selection of parameter set A/B or flow
  Measured value and tag number ("TAG")
- Time and date

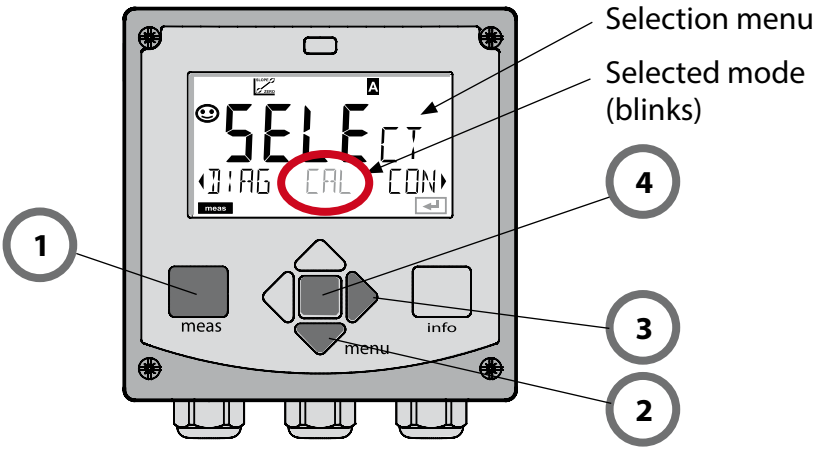
Note: By pressing the **meas** key in measuring mode you can view the displays for approx. 60 sec.

The device must be configured for the respective measurement task, see page 34.

Selecting the Mode / Entering Values

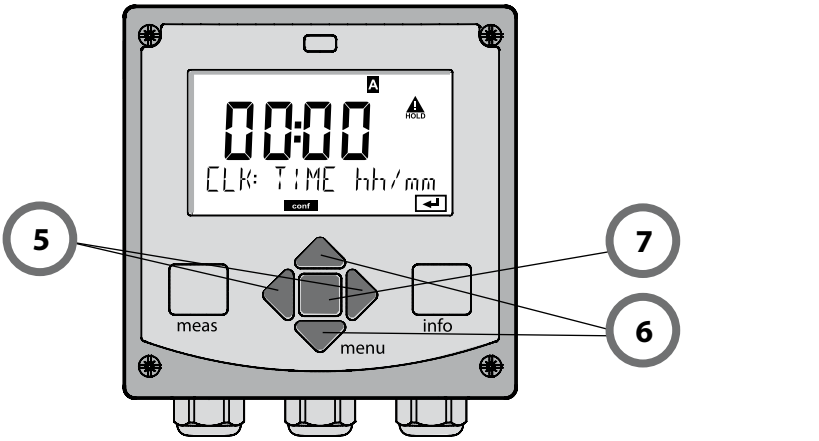
To select the operating mode:

1) Hold **meas** key depressed (> 2 s) (directly to measuring mode)
2) Press **menu** key: the selection menu appears
3) Select operating mode using left / right arrow key
4) Press **enter** to confirm the selected mode

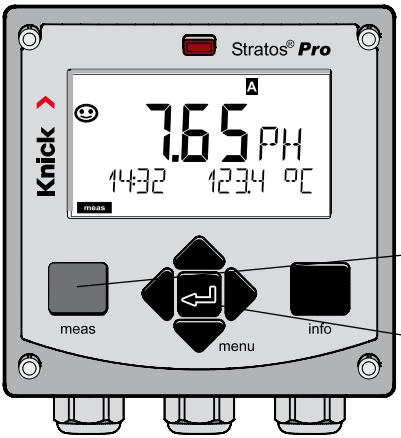


To enter a value:

5) Select numeral: left / right arrow key
6) Change numeral: up / down arrow key
7) Confirm entry by pressing **enter**



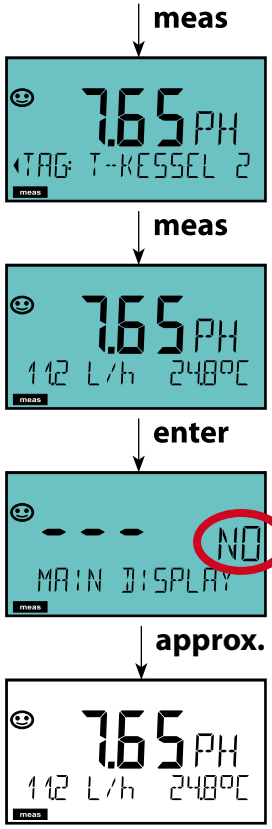
Display in Measuring Mode



The MAIN DISPLAY is the display which is shown in measuring mode. To call the measuring mode from any other mode, hold the **meas** key depressed for at least 2 sec.

meas key

enter key

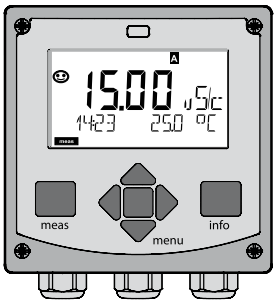


By pressing **meas** briefly you can step through further displays such as tag number (TAG) or flow (L/h). These displays are turquoise. After 60 sec they switch back to the main display.

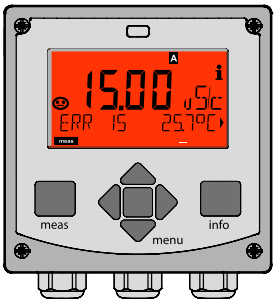
Press **enter** to select a display as MAIN DISPLAY – the secondary display shows "MAIN DISPLAY – NO". Use the **UP** / **DOWN** arrow keys to select "MAIN DISPLAY – YES" and confirm by pressing **enter**. The display color changes to white. This display is now shown in measuring mode.

Color-Coded User Interface

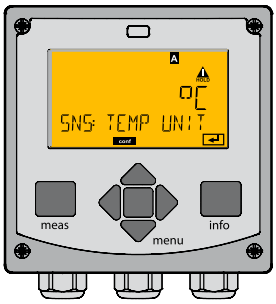
The color-coded user interface* guarantees increased operating safety. Operating modes are clearly signaled.The normal measuring mode is white. Information text appears on a green screen and the diagnostic menu appears on turquoise.
The orange HOLD mode (e.g. during calibration) is quickly visible as is the magenta screen which indicates asset management messages for predictive diagnostics – such as maintenance request, pre-alarm and sensor wear.
The alarm status has a particularly noticeable red display color and is also signaled by flashing display values. Invalid inputs or false pass-codes cause the entire display to blink red so that operating errors are noticeably reduced.



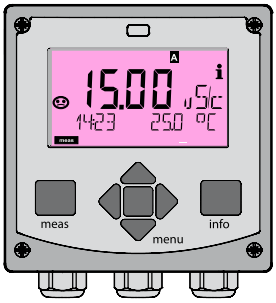
White:
Measuring mode



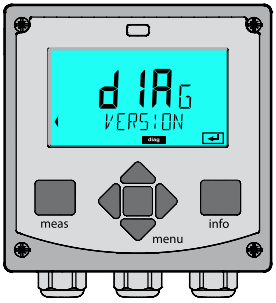
Red blinking:
Alarm, errors



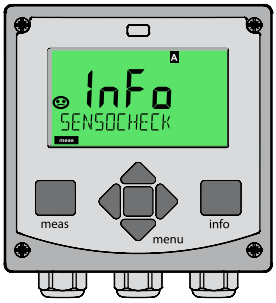
Orange:
HOLD mode



Magenta:
Maintenance request



Turquoise:
Diagnostics



Green:
Information texts

* can be turned off

Diagnostics
Display of calibration data, display of sensor data, performing a device self-test, viewing the logbook entries, display of hardware/software versions of the individual components. The logbook (TAN SW-A002) can store 100 events (00...99). They can be displayed directly on the device. Wit AuditTrail (TAN SW-A003), the logbook can be extended to 200 entries.

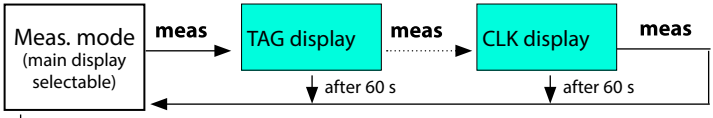
HOLD
Manual activation of HOLD mode, e.g. for replacing a digital sensor. The signal outputs adopt a defined state.

Calibration
Every sensor has typical characteristic values, which change in the course of the operating time. Calibration is required to supply a correct measured value. The device checks which value the sensor delivers when measuring in a known solution. When there is a deviation, the device can be "adjusted". In that case, the device displays the "actual" value and internally corrects the measurement error of the sensor. Calibration must be repeated at regular intervals. The time between the calibration cycles depends on the load on the sensor. During calibration the device is in HOLD mode.
During calibration the device remains in the HOLD mode until it is stopped by the operator.

Configuration
The analyzer must be configured for the respective measurement task. In the "Configuration" mode you select the connected sensor, the measuring range to be transmitted, and the conditions for warning and alarm messages. During configuration the device is in HOLD mode.
Configuration mode is automatically exited 20 minutes after the last keystroke. The device returns to measuring mode.

Service
Maintenance functions (monitor, current source), passcode assignment, reset to factory settings, enabling of options (TAN).

Menu Structure of Modes and Functions



Pressing the **menu** key (down arrow) opens the selection menu.
Select the menu group using the left/right arrow keys.
Pressing **enter** opens a menu item. Press **meas** to return.

DIAG	CALDATA	Display of calibration data
	SENSOR	Display of sensor data
	SELFTEST	Self test: RAM, ROM, EEPROM, module
	LOGBOOK	100 events with date and time
	MONITOR	Display of measured values (mV_pH, mV_ORP, RTD, resistances of glass electrode, reference electrode)
	VERSION	Display of software version, model designation, serial number
HOLD		Manual activation of HOLD mode, e.g. for sensor replacement. The signal outputs behave as configured (e.g. last measured value, 21 mA)
CAL	CAL_PH	pH adjustment (as configured)
	CAL_ORP	ORP adjustment
	P_CAL	Product calibration
	ISFET-ZERO	Zero adjustment (for ISFET only)
	CAL_RTD	Adjustment of temperature probe
CONF	PARSET A	Configuring parameter set A
	PARSET B	Configuring parameter set B
SERVICE (Access via code, factory setting: 5555)	MONITOR	Display of measured values for validation (simulators)
	SENSOR	Reset TTM (for ISM), increment autoclaving counter
	OUT1	Current source, output 1
	OUT2	Current source, output 2
	CODES	Specifying access codes for operating modes
	DEFAULT	Reset to factory setting
	OPTION	Enabling an option via TAN

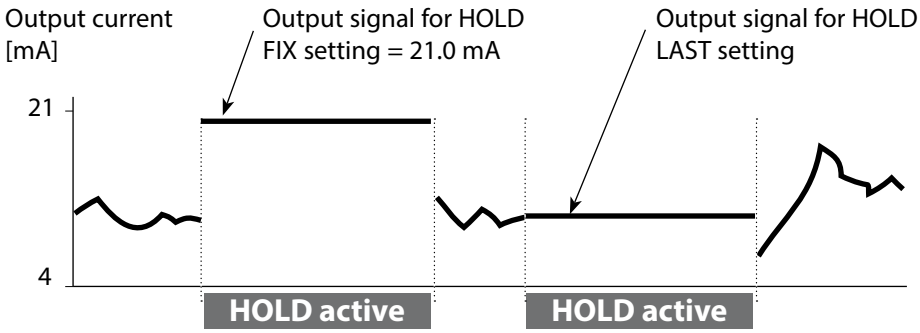
The HOLD mode is a safety state during configuration and calibration. Output current is frozen (LAST) or set to a fixed value (FIX).
The HOLD mode is indicated by orange display backlighting.

HOLD mode, display icon:

Output signal response

- **LAST:** The output current is frozen at its last value. Recommended for short configuration procedures. The process should not change decisively during configuration. Changes are not noticed with this setting!
- **FIX:** The output current is set to a value that is noticeably different from the process value to signal the control system that the device is being worked at.

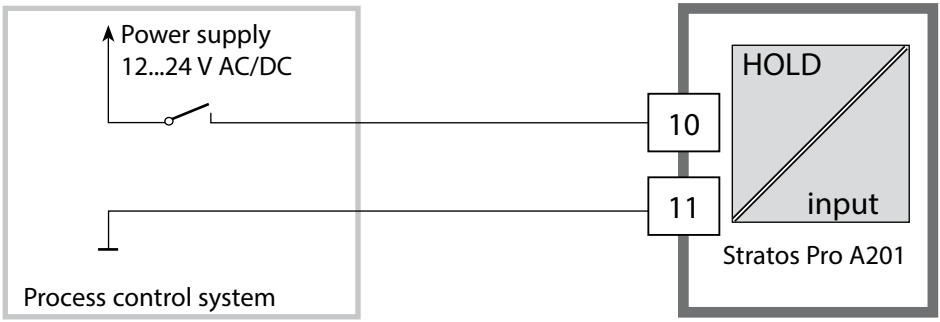
Output signal during HOLD:



Terminating the HOLD mode

The HOLD mode is ended by switching to measuring mode (hold **meas** key depressed). The display reads "Good Bye", after that, the HOLD mode is exited.
When the calibration mode is exited, a confirmation prompt ensures that the installation is ready for operation (e.g.: sensor reinstalled, located in process).

External activation of HOLD (TAN SW-A005)
The HOLD mode can be activated from outside by sending a signal to the HOLD input (e.g. from the process control system).



HOLD inactive	0...2 V AC/DC
HOLD active	10...30 V AC/DC

Manual activation of HOLD
The HOLD mode can be activated manually from the HOLD menu. This allows checking or replacing a sensor, for example, without provoking unintended reactions at the outputs.
Press **meas** key to return to selection menu.

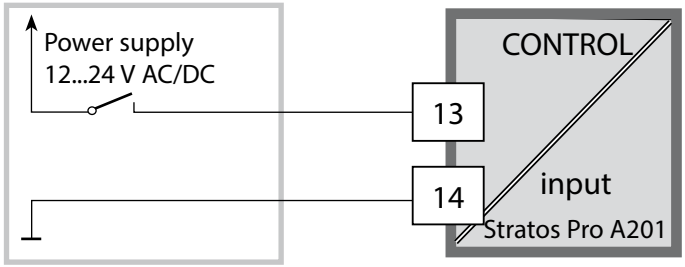
Alarm

When an error has occurred, **Err xx** is displayed immediately.
Only after expiry of a user-defined delay time will the alarm be registered and entered in the logbook.
During an alarm the display blinks, the display backlighting turns **red**.

Error messages can also be signaled by a 22 mA output current (see Configuration).
2 sec after the failure event is corrected, the alarm status will be deleted.

Message	Released by	Cause
Alarm	Sensocheck	Polarization / Cable
(22 mA)	Error messages	Flow (CONTROL input)
HOLD	HOLD	HOLD via menu or input
(Last/Fix)	CONF	Configuration
	CAL	Calibration
	SERVICE	Service

Generating a message via the CONTROL input (TAN SW-A005) (min. flow / max. flow)
The CONTROL input can be used for parameter set selection or for flow measurement (pulse principle), depending on its assignment in the "Configuration" menu.
When preset to flow measurement
CONF/CNTR_IN/CONTROL = FLOW
an alarm can be generated when the measured flow exceeds a specified range:
CONF/ALA/FLOW CNTR = ON
CONF/ALA/FLOW min (specify value, default: 5 liters/h)
CONF/ALA/FLOW max (specify value, default: 25 liters/h)



Configuration

⚠ **CAUTION!** Incorrect parameter settings or adjustments can result in incorrect outputs. Stratos Pro must therefore be commissioned by a system specialist, all its parameters must be set, and it must be fully adjusted. For detailed information on parameter setting and adjustment, see the user manual

Menu Structure of Configuration

The device provides 2 parameter sets "A" and "B". By switching between the parameter sets you can adapt the device to different measurement situations, for example.
Parameter set "B" only permits setting of process-related parameters.
The configuration steps are assigned to different menu groups.
With the left/right arrow keys you can jump between the individual menu groups.
Each menu group contains menu items for setting the parameters.
Pressing **enter** opens a menu item. Use the arrow keys to edit a value.
Press **enter** to confirm/save the settings.
Return to measurement: Hold **meas** key depressed (> 2 s).

Select menu group	Menu group	Code	Display	Select menu item

Support of Pfaudler Sensors

This requires an additional function (TAN). The option is enabled in the SERVICE > OPT: PFAUDLER menu (see page 103).

When you use a Memosens Pfaudler sensor, the data will be read from the sensor or will be set to standard values. Here, you do not have to make entries. The respective menu items will be suppressed.
The nominal ZERO/SLOPE values are required for the proper functioning of the sensor monitoring and calibration functions (Sensoface, Calimatic), they do not replace an adjustment (calibration)!

Note:
Please refer to the operating instructions of the respective sensor for more information on functioning, installation, calibration and configuration.

Configuration (Template for Copy)

Parameters	Parameter set A	Parameter set B

Menu item	Action	Choices
Calibration timer 	Adjust CALTIMER using ▲ ▼ keys: OFF: No timer ADAPT: Maximum cal cycle (adjust in the next step) FIX: Fixed cal cycle (adjust in the next step) Press **enter** to confirm.	**OFF**/ADAPT/FIX With ADAPT, the calibration cycle is automatically reduced depending on the sensor load (high temperatures and pH values) and for digital sensors also depending on the sensor wear
Calibration cycle 	Only with FIX/ADAPT: Modify digit using ▲ ▼ keys, select next digit using ◀ ▶ keys. Press **enter** to confirm.	0...9999 h

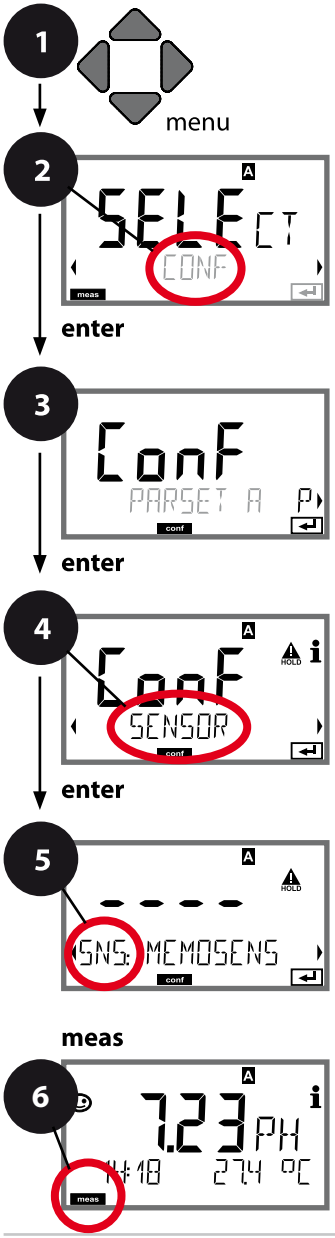
Note for the calibration timer:
When Sensocheck has been activated in the Configuration – Alarm menu, the expiration of the calibration interval is indicated by Sensoface:

Display	Status
+	Over 80 % of the calibration interval has already past.
+	The calibration interval has been exceeded.

The calibration timer settings apply to both parameter sets A and B.

The time remaining until the next due calibration can be seen in the diagnostics menu (see Diagnostics chapter).

Sensor
Adjust: CIP cleaning cycles, SIP sterilization cycles



1) Press **menu** key.
2) Select **CONF** using ◂ ▸ keys, press **enter**.
3) Select parameter set using ◂ ▸, press **enter**.
4) Select **SENSOR** menu using ◂ ▸ keys, press **enter**.
5) All items of this menu group are indicated by the "SNS:" code.
   Press **enter** to select menu,
   edit using arrow keys (see next page).
   Confirm (and proceed) by pressing **enter**.
6) Exit: Press **meas** key until the [meas] mode indicator is displayed.

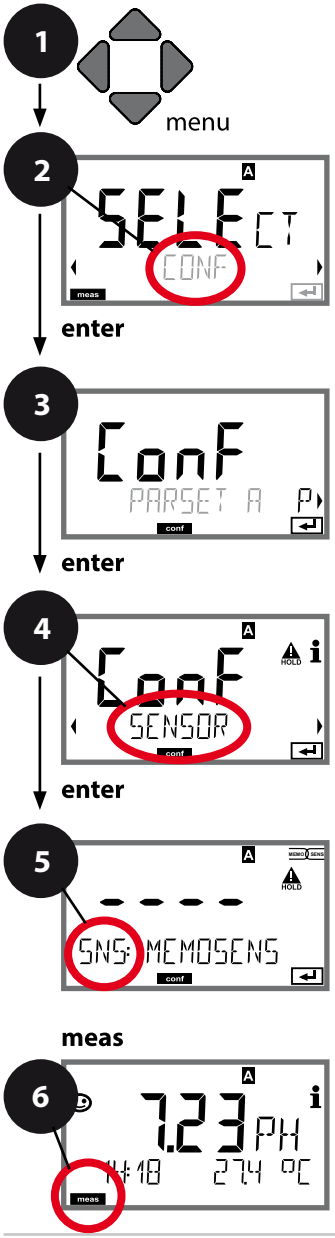
Autoclaving Counter

After reaching a specified limit value the autoclaving counter generates a Sensoface message. As soon as the counter has reached the specified value, Sensoface is getting "sad". Pressing the info key shows the text "AUTOCLAVE CYCLES OVERRUN" which reminds you that the maximum number of autoclaving cycles has been reached. After each autoclaving process, you must manually increment the autoclaving counter in the SENSOR service menu on the transmitter. The transmitter displays "INCREMENT AUTOCLAVE CYCLE" as confirmation. You can configure the current outputs so that a Sensoface message generates a 22-mA error signal, see page 61.

Menu item	Action	Choices
Autoclaving counter 	Select using ▲ ▼ keys: ON: The cycles are entered manually (0 ... 9999) Press **enter** to confirm.	**OFF**/ON
With the autoclaving counter switched on, you must increment the count after each autoclaving process in the SERVICE menu SENSOR > AUTOCLAVE :		
Incrementing the autoclaving counter (SERVICE menu) 	After having completed an autoclaving process, open the SERVICE menu SENSOR > AUTOCLAVE to increment the autoclaving count. To do so, select "**YES**" and confirm by pressing **enter**.	**NO** / YES

Memosens Sensor
Sensor Verification (TAG, GROUP)



1) Press **menu** key.

GROUP 	Select ON or OFF using ▲ ▼ keys. Press **enter** to confirm. Function as described above	ON/**OFF**

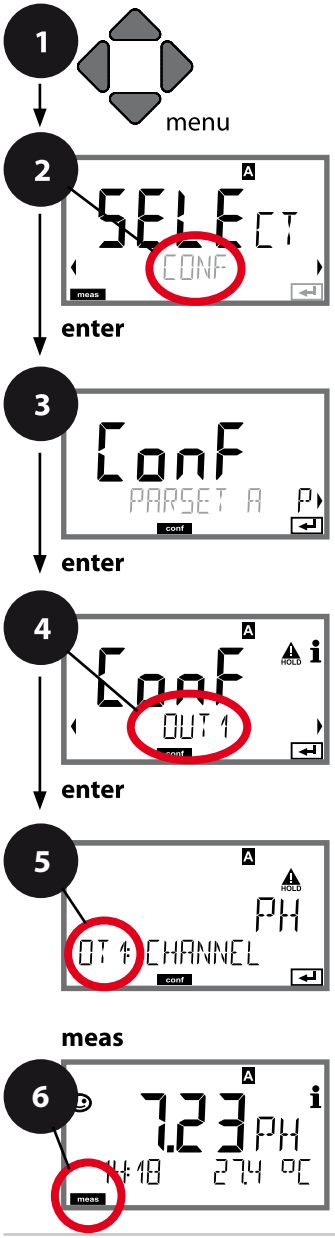
Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated, Sensoface gets "sad", and the display backlighting turns purple (magenta). The "sad" Sensoface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.

When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Current Output 1

Output current range. Current start, Current end.



1) Press **menu** key.
2) Select **CONF** using ◂ ▸ keys, press **enter**.
3) Select parameter set using ◂ ▸ keys, press **enter**.
4) Select **OUT1** menu using ◂ ▸ keys, press **enter**.
5) All items of this menu group are indicated by the "OT1:" code.
   Press **enter** to select menu,
   edit using arrow keys (see next page).
   Confirm (and proceed) using **enter**.

Output current during HOLD
Output current for HOLD FIX

enter

Menu item	Action	Choices
Time averaging filter 	Enter value using ▲ ▼ ◀ ▶ keys. Press **enter** to confirm.	0...120 SEC (**0000 SEC**)

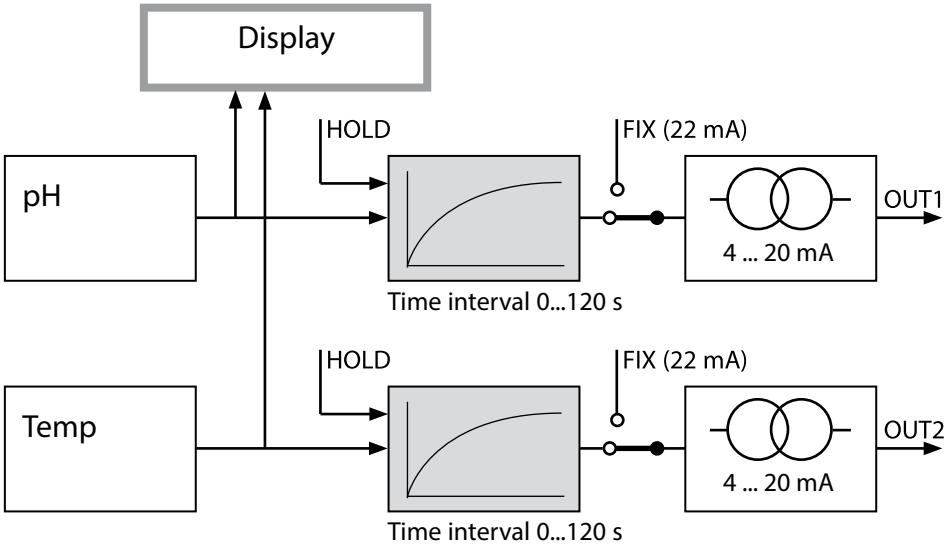
Time averaging filter

To smoothen the current output, a low-pass filter with adjustable filter time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time interval has been reached. The time interval can be set from 0 to 120 sec. If the time interval is set to 0 sec, the current output directly follows the input.

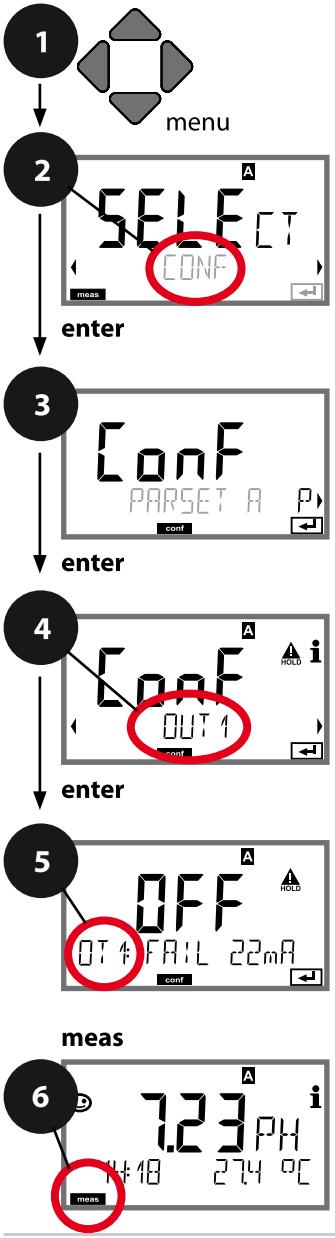
Note:

The filter only acts on the current output, not on the display or the limit value!

During HOLD the filter is not applied. This prevents a jump at the output.



Current Output 1
Output current for error message or Sensoface alert



1) Press **menu** key.
2) Select **CONF** using ◂ ▸ keys, press **enter**.
3) Select parameter set using ◂ ▸ keys, press **enter**.
4) Select **OUT1** menu using ◂ ▸ keys, press **enter**.
5) All items of this menu group are indicated by the "OT1:" code.

5) All items of this menu group are indicated by the "TAG:" or "DSP" code.
   Press **enter** to select menu,
   edit using arrow keys (see next page).
   Confirm (and proceed) by pressing **enter**.
6) Exit: Press **meas** key until the [meas] mode indicator is displayed.

Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated, Sensoface gets "sad", and the display backlighting turns purple (magenta). The "sad" Sensoface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.
When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Menu item	Action	Choices
Measuring point (TAG) 	In the lower display line you can enter a designation for the measuring point (TAG) and for a group of measuring points (GROUP) if applicable. Up to 32 digits are possible. Select character using ▲ ▼ keys, select next digit using ◀ ▶ keys. Press **enter** to confirm. By pressing **meas** (repeatedly) in the measuring mode you can view the tag number.	A...Z, 0...9, – + < > ? / @ The first 10 characters are seen in the display without scrolling.

Switch Off the Display Backlighting

The display backlighting can be switched off in the DISPLAY menu.

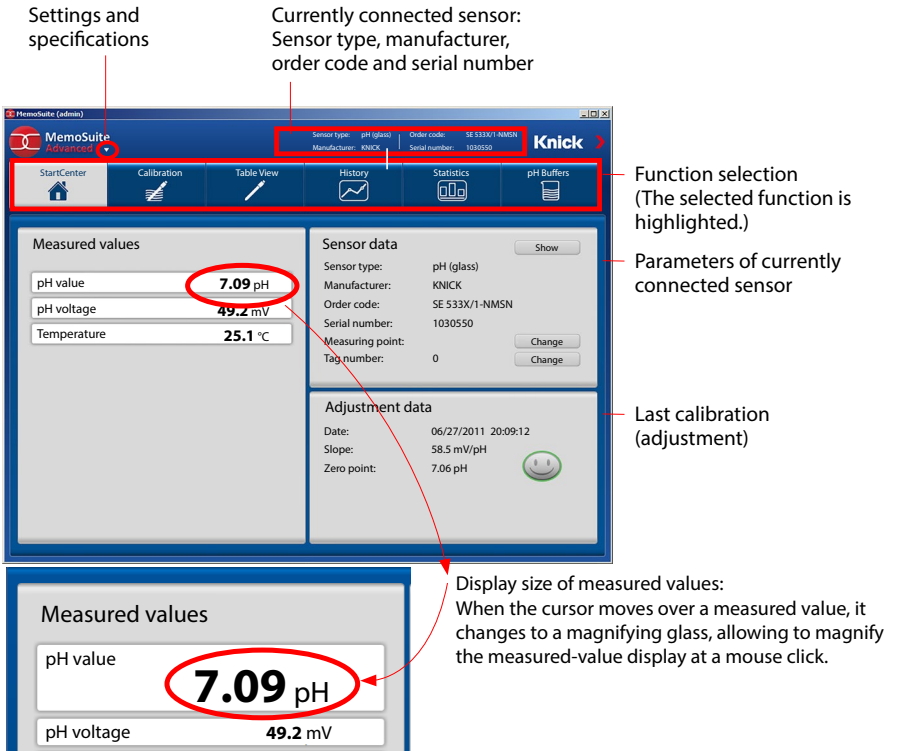
Note: If the display backlighting is off, color signaling of error events is not possible.

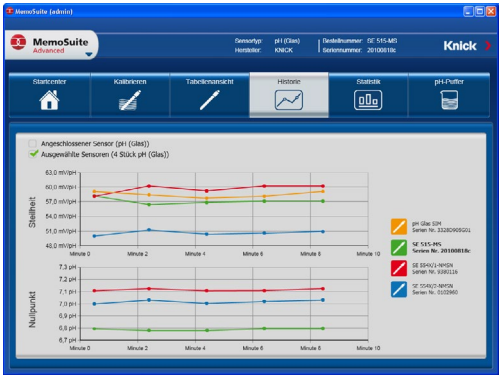
Digital Sensors

Stratos Pro can be operated with digital sensors. Due to the galvanic isolation of Memosens sensors, earth or ground potentials have no effect here. Therefore, a Solution Ground or measures for equipotential bonding are not required.
Digital sensors can be calibrated and maintained in the lab.
This considerably simplifies on-site maintenance.

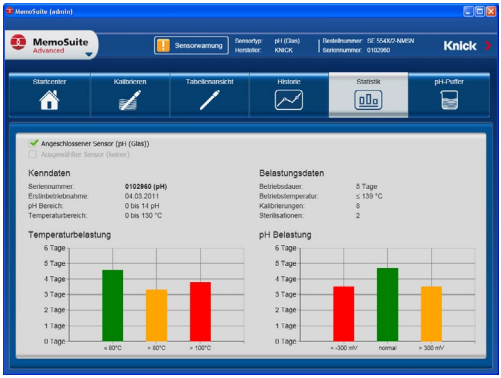
Memosens Sensors: Calibration and Maintenance in the Lab

The "MemoSuite" software allows calibrating Memosens sensors under reproducible conditions at a PC in the lab. The sensor parameters are registered in a database. Documenting and archiving meet the demands of FDA CFR 21 Part 11. Detailed reports can be output as csv export for Excel.





Calibration history of several sensors



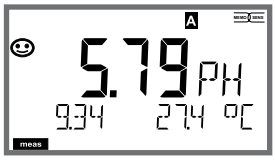
History: Load diagrams of the sensors

The comprehensive display options of the software allow drawing conclusions on the aging behavior of the sensors at one glance and making a reliable forecast for predictive maintenance.

The software is available as "Basic" (calibration function) or "Advanced" (with sensor database) version: www.knick.de

Memosens Sensors: Configuring the Device

The sensor type is selected during **Configuration**.
The device only switches to measuring mode when the connected sensor corresponds to the type configured (Sensoface is friendly):



Otherwise, an error message is released. The **info** icon is displayed. You can display the error text in the bottom line using the ◀ ▶ keys.

Connecting a Digital Sensor

Step	Action/Display	Remark
Connect sensor		Before a digital sensor is connected, the error message “No sensor“ is displayed.
Wait until the sensor data are displayed.		The hourglass in the display blinks.
Check sensor data	 View sensor information using ◀ ▶ keys, press **enter** to confirm.	Display color changes to **green**. Sensoface is friendly when the sensor data are okay.
Go to measuring mode	Press **meas**, **info** or **enter**	After 60 sec the device automatically returns to measuring mode (time-out).

Replacing a Sensor

A sensor should only be replaced during HOLD mode to prevent unintended reactions of the outputs or contacts. When you first want to calibrate the new sensor, it can also be replaced in calibration mode.

Step	Action/Display	Remark
Select HOLD mode	Press **menu** key to call the selection menu, select HOLD using the ◂ ▸ keys, press **enter** to confirm.	Now the device is in HOLD mode. The HOLD mode can also be activated externally via the HOLD input. During HOLD the output current is frozen at its last value or set to a fixed value.
Disconnect old sensor, connect new sensor.		Temporary messages are displayed during the replacement but neither output to the alarm contact nor entered in the logbook.
Wait until the sensor data are displayed.		
Check sensor data	 View sensor information using ◂ ▸ keys, press **enter** to confirm.	You can view the sensor manufacturer and type, serial number, and last calibration date.
Check measured values, then exit HOLD.	Hit **meas** key: Return to the selection menu. Hold **meas** key depressed: Device switches to measuring mode.	The sensor replacement is entered in the extended logbook.

Calibration

Note:

- All calibration procedures must be performed by trained personnel. Incorrectly set parameters may go unnoticed, but change the measuring properties.

- The response time of the sensor and temperature probe is considerably reduced when the sensor is first moved about in the buffer solution and then held still.

- The device can only operate properly when the buffer solutions used correspond to the configured set. Other buffer solutions, even those with the same nominal values, may demonstrate a different temperature response. This leads to measurement errors.

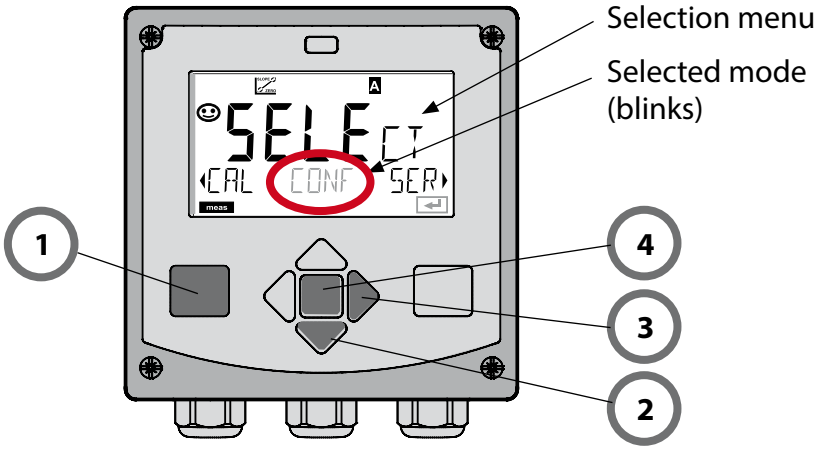
When using ISFET sensors or sensors with a zero point other than pH 7, the nominal zero point must be adjusted each time a new sensor is connected. This is important if you want to obtain reliable Sensoface messages. The Sensoface messages issued during all further calibrations are based on this basic calibration.

Selecting a Calibration Mode

Calibration is used to adapt the device to the individual sensor characteristics, namely asymmetry potential and slope.
Access to calibration can be protected with a passcode (SERVICE menu).
First, you open the calibration menu and select the calibration mode:

CAL_PH	Depending on configuation setting:	
	AUTO	Automatic buffer recognition (Calimatic)
	MAN	Manual buffer input
	DAT	Input of premeasured electrode data
CAL_ORP	ORP calibration	
P_CAL	Product calibration (calibration with sampling)	
ISFET-ZERO	Zero adjustment. Required for ISFET sensors, subsequently you can conduct either a one or a two-point calibration.	
CAL_RTD	Temperature probe adjustment	

To preset CAL_PH (CONF menu / configuration):
1) Hold **meas** key depressed (> 2 s) (measuring mode)
2) Press **menu** key: the selection menu appears
3) Select CONF mode using left / right arrow key
4) Select "SENSOR" – "CALMODE": AUTO, MAN, or DAT.
   Press **enter** to confirm



Zero Adjustment (ISFET)

This adjustment allows the use of ISFET sensors with differing nominal zero (pH only). The function is available when Sensor selection = MEMOSENS has been set during configuration. Zero adjustment is disabled for any other sensors.
The adjustment is made using a zero buffer (pH 7.00).
Permitted range for buffer value: pH 6.5 ... 7.5.
Temperature-corrected input. Maximum zero offset: ± 200 mV.

Display	Action	Remark
	Select Calibration. Press **enter** to proceed.	
	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Immerse sensor in a pH 7.00 buffer. Enter the temperature-corrected pH value in the range 6.50 to 7.50 using the arrow keys (see buffer table). Confirm with **enter.**	If the zero offset of the sensor is too large (> ± 200 mV), a CAL ERR error message is generated. In that case the electrode cannot be calibrated.
	Stability check. The measured value [mV] is displayed. The "hourglass" icon is blinking.	**Note:** Stability check can be stopped (by pressing **enter**). However, this reduces calibration accuracy.

Display	Action	Remark
	At the end of the adjustment procedure the zero offset [mV] of the sensor is displayed (based on 25 °C). Sensoface is active. Press **enter** to proceed.	This is not the final calibration value of the sensor! Asymmetry potential and slope must be determined with a complete 2-point calibration.
	Use the arrow keys to select: • Repeat (repeat calibration) or • Measuring. Confirm by pressing **enter**.	
	Place sensor in process. End zero calibration with **enter**.	After end of calibration, the outputs remain in HOLD mode for a short time.

Note for zero adjustment
After having adjusted the zero offset, be sure to calibrate the sensor following one of the procedures as described on the next pages.

Automatic Calibration (Calimatic)

The AUTO calibration mode and the type of temperature detection are selected during **configuration**. Make sure that the buffer solutions used correspond to the configured buffer set. Other buffer solutions, even those with the same nominal values, may demonstrate a different temperature response. This leads to measurement errors.

Display	Action	Remark
	Select Calibration. Press **enter** to proceed.	
	Ready for calibration. Hourglass blinks. Select calibration method: CAL_PH Press **enter** to proceed.	Display (3 sec) Now the device is in HOLD mode.
	Remove the sensor and temperature probe, clean them, and immerse them in the first buffer solution (in any order). Start with **enter**	When manual input of temperature has been configured, the temp value in the display blinks and can be edited using the arrow keys.
 	Buffer recognition. While the "hourglass" icon is blinking, the sensor and temperature probe remain in the first buffer solution. Buffer recognition terminated, the nominal buffer value is displayed.	The response time of the sensor and temperature probe is considerably reduced when the sensor is first moved about in the buffer solution and then held still.

Display	Action	Remark
 	At the end of the stability check, the value will be saved and the asymmetry potential will be displayed. Calibration with the first buffer is terminated. Remove the sensor and temp probe from the first buffer solution and rinse them thoroughly. **Use the arrow keys to select:** • END (1-point cal) • CAL2 (2-point cal) • REPEAT Press **enter** to proceed.	**Note:** Stability check can be stopped after 10 sec (by pressing **enter**). However, this reduces calibration accuracy. Display for 1-point cal:  Sensoface is active. End with **enter**
	2-point calibration: Immerse sensor and temperature probe in the second buffer solution. Start with **enter**	The calibration process runs as for the first buffer.
	Retract sensor and temp probe out of second buffer, rinse off, re-install. Press **enter** to proceed.	The slope and asymmetry potential of the sensor (based on 25 °C) are displayed.
	**Use the arrow keys to select:** • MEAS (exit) • REPEAT Press **enter** to proceed. Exit: HOLD is deactivated with delay.	When 2-point cal is ended: 

Manual Calibration with Buffer Entry

The MAN calibration mode and the type of temperature detection are selected during **configuration**. For calibration with manual buffer specification, you must enter the pH value of the buffer solution used in the device for the proper temperature. Any desired buffer solution can be used for calibration.

Display	Action	Remark
	Select Calibration. Press **enter** to proceed.	
	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Remove the sensor and temperature probe, clean them, and immerse them in the first buffer solution. Press **enter** to start.	When manual input of temperature has been configured, the temp value in the display blinks and can be edited using the arrow keys.
 	Enter the pH value of your buffer solution for the proper temperature. While the "hourglass" icon is blinking, the sensor and temperature probe remain in the buffer solution.	The response time of the sensor and temperature probe is considerably reduced when the sensor is first moved about in the buffer solution and then held still.

Display	Action	Remark
	At the end of the stability check, the value will be saved and the asymmetry potential will be displayed. Calibration with the first buffer is terminated. Remove the sensor and temp probe from the first buffer solution and rinse them thoroughly. **Use the arrow keys to select:** • END (1-point cal) • CAL2 (2-point cal) • REPEAT Press **enter** to proceed.	**Note:** Stability check can be stopped after 10 sec (by pressing **enter**). However, this reduces calibration accuracy. Display for 1-point cal:  Sensoface is active. End with **enter**
	2-point calibration: Immerse sensor and temperature probe in the second buffer solution. Enter pH value. Press **enter** to start.	The calibration process runs as for the first buffer.
	Rinse sensor and temperature probe and reinstall them. Press **enter** to proceed.	Display of slope and new asymmetry potential (based on 25 °C).
	**Use the arrow keys to select:** • MEAS (exit) • REPEAT Press **enter** to proceed. Exit: HOLD is deactivated with delay.	When 2-point cal is ended: 

Data Entry of Premeasured Sensors

The DAT calibration mode must have been preset during configuration.
You can directly enter the values for slope and asymmetry potential of a sensor. The values must be known, e.g. determined beforehand in the laboratory.

Display	Action	Remark
	Select Calibration. Press **enter** to proceed.	
	"Data Input" Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Enter asymmetry potential [mV]. Press **enter** to proceed.	
	Enter slope [%].	
	The device displays the new slope and asymmetry potential (at 25 °C). Sensoface is active.	
	**Use the arrow keys to select:** • MEAS (exit) • REPEAT Press **enter** to proceed.	Exit: HOLD is deactivated with delay.

Converting slope [%] to slope [mV/pH] at 25 °C

%	mV/pH
78	46.2
80	47.4
82	48.5
84	49.7
86	50.9
88	52.1
90	53.3
92	54.5
94	55.6
96	56.8
98	58.0
100	**59.2**
102	60.4

Converting asymmetry potential to sensor zero point

$$ZERO = 7 - \frac{V_{AS}[mV]}{S\ [mV / pH]}$$

ZERO = Sensor zero

V_{AS} = Asymmetry potential

S = Slope

Product Calibration (pH)

Calibration by sampling (one-point calibration).
During product calibration the sensor remains in the process.
The measurement process is only interrupted briefly.

Procedure:

1) The sample is measured in the lab or directly on the site using a portable meter. To ensure an exact calibration, the sample temperature should correspond to the measured process temperature.
   During sampling the device saves the currently measured value and then returns to measuring mode. The "calibration" mode indicator blinks.
2) In the second step you enter the measured sample value in the device. From the difference between the stored measured value and entered sample value, the device calculates the new asymmetry potential.

If the sample is invalid, you can take over the value stored during sampling. In that case the old calibration values are stored.
Afterwards, you can start a new product calibration.

Display	Action	Remark
	Select product calibration: P_CAL. Press **enter** to proceed.	
	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Take sample and save value. Press **enter** to proceed.	Now the sample can be measured.

Display	Action	Remark
	The device returns to measuring mode.	From the blinking CAL mode indicator you see that product calibration has not been terminated.
	Product calibration step 2	Display (3 sec) Now the device is in HOLD mode.
	The stored value is displayed (blinking) and can be overwritten with the measured sample value. Press **enter** to proceed.	
	Display of new asymmetry potential (based on 25°C). Sensoface is active. To exit calibration: Select MEAS, then press **enter**	To repeat calibration: Select REPEAT, then press **enter**
End of calibration	After end of calibration, the outputs remain in HOLD mode for a short time.	

ORP (Redox) Calibration

The potential of a redox sensor is calibrated using a redox (ORP) buffer solution. In the course of that, the difference between the measured potential and the potential of the calibration solution is determined according to the following equation. During measurement this difference is added to the measured potential.

$$mV_{ORP} = mV_{meas} - \Delta mV$$

mV_{ORP} = displayed ORP

mV_{meas} = direct sensor potential

ΔmV = delta value, determined during calibration

The sensor potential can also be related to another reference system – e.g. the standard hydrogen electrode. In that case the temperature-corrected potential (see table) of the reference electrode used must be entered during calibration. During measurement, this value is then added to the ORP measured.
Please make sure that measurement and calibration temperature are the same since the temperature behavior of the reference electrode is not automatically taken into account.

Temperature dependence of commonly used reference systems measured against SHE

Temperature [°C]	Ag/AgCl/KCl 1 mol/l [ΔmV]	Ag/AgCl/KCl 3 mol/l [ΔmV]	Thalamid [ΔmV]	Mercury sulfate [ΔmV]
0	249	224	-559	672
10	244	217	-564	664
20	240	211	-569	655
25	236	207	-571	651
30	233	203	-574	647
40	227	196	-580	639
50	221	188	-585	631
60	214	180	-592	623
70	207	172	-598	613
80	200	163	-605	603

Display	Action	Remark
	Select ORP calibration, proceed with **enter**	
	Remove the sensor and temperature probe, clean them, and immerse them in the redox buffer.	Display (3 sec) Now the device is in HOLD mode.
	Enter setpoint value for redox buffer. Press **enter** to proceed.	
	The ORP delta value is displayed (based on 25°C). Sensoface is active. Press **enter** to proceed.	
	To repeat calibration: Select REPEAT. To exit calibration: Select MEAS, then press **enter**	After end of calibration, the outputs remain in HOLD mode for a short time.

Temp Probe Adjustment

Display	Action	Remark
	Select temp adjustment. Press **enter** to proceed.	Wrong settings change the measurement properties!
	Measure the temperature of the process medium using an external thermometer.	Display (3 sec) Now the device is in HOLD mode.
	Enter the measured temperature value. Maximum difference: 10 K. Press **enter** to proceed.	Display of actual temperature (uncompensated) in the lower display.
	The corrected temperature value is displayed. Sensoface is active. To exit calibration: Select MEAS, then press **enter** To repeat calibration: Select REPEAT, then press **enter**	
	After calibration is ended, the device will switch to measuring mode.	After end of calibration, the outputs remain in HOLD mode for a short time.

Display	Remark
 or AM/PM and °F: 	From the configuration or calibration menus, you can switch the device to measuring mode by pressing the **meas** key. In the measuring mode the upper display shows the configured process variable (pH, ORP [mV], or temperature), the lower display line shows the time and the second configured process variable (pH, ORP [mV], or temperature). The [meas] mode indicator lights and the active parameter set (A/B) is indicated.
By pressing the **meas** key you can step through the following displays. When no key has been pressed for 60 sec, the device returns to the MAIN DISPLAY.	
  	1) Selecting the parameter set (if set to "manual" in the configuration). Select the desired parameter set using the ◂ ▸ arrow keys (PARSET A or PARSET B blinks in the lower display line). Press **enter** to confirm. Further displays (each by pressing **meas**). 2) Display of tag number ("TAG") 3) Display of time and date

Diagnostics

In the Diagnostics mode you can access the following menus without interrupting the measurement:

CALDATA	Viewing the calibration data
SENSOR	Viewing the sensor data
SELFTEST	Starting a device self-test
LOGBOOK	Viewing the logbook entries
MONITOR	Displaying currently measured values
VERSION	Displaying device type, software version, serial number

Access to diagnostics can be protected with a passcode (SERVICE menu).

Note:
HOLD is not active during Diagnostics mode!

Action	Key	Remark
Activate Diagnostics	 menu	Press **menu** key to call the selection menu. (Display color changes to turquoise.) Select DIAG using ◂ ▸ keys, confirm by pressing **enter**.
Select diagnostics option		Use ◂ ▸ keys to select from: CALDATA SENSOR SELFTEST LOGBOOK MONITOR VERSION See next pages for further proceeding.
Exit	**meas**	Exit by pressing **meas**.

Display	Menu item
    	**Display of calibration data** Select CALDATA using ◂ ▸, confirm with **enter**. Use the ◂ ▸ keys to select the desired parameter from the bottom line of the display (LAST_CAL ISFET-ZERO ZERO SLOPE NEXT_CAL). The selected parameter is shown in the main display. Press **meas** to return to measurement.
 	**Display of sensor data** For analog sensors, the type is displayed (STANDARD / ISFET). Not applicable for digital transmitters (-MSPH). For digital sensors, the manufacturer, type, serial number, and last calibration date is displayed. In each case Sensoface is active. Display data using ◂ ▸ keys, return by pressing **enter** or **meas**.

Display	Menu item
	**Device self-test** (To abort, you can press **meas**.) 1) **Display test**: Display of all segments with changing background colors (white/green/red). Press **enter** to proceed.
	2) **RAM test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Press **enter** to proceed.
	3) **EEPROM test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Press **enter** to proceed.
	4) **FLASH test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Press **enter** to proceed.

Display	Menu item
  	**Displaying the logbook entries** Select LOGBOOK using ◀ ▶, press **enter** to confirm. Using the ▲ ▼ keys, you can scroll backwards and forwards through the logbook (entries -00-...-99-), -00- being the last entry. If the display is set to date/time, you can search for a particular date using the ▲ ▼ keys. Press ◀ ▶ to view the corresponding message text. If the display is set to the message text, you can search for a particular message using the ▲ ▼ keys. Press ◀ ▶ to display the date and time. Press **meas** to return to measurement.
	**Extended logbook / Audit Trail (via TAN)** Using the ▲ ▼ keys, you can scroll backwards and forwards through the extended logbook (entries -000-...-199-), -000- being the last entry. **Display: CFR** Audit Trail also records function activations (CAL CONFIG SERVICE), some Sensoface messages (cal timer, wear) and opening of the enclosure.

Display	Menu item
	**Displaying the currently measured values (sensor monitor)** Select MONITOR using ◂ ▸, press **enter** to confirm. Use the ◂ ▸ keys to select the desired parameter from the bottom line of the display: mV_PH mV_ORP RTD R_GLASS R_REF I-INPUT (for digital sensors also: OPERATION TIME SENSOR WEAR LIFETIME CIP SIP AUTOCLAVE, for ISM sensors in addition: ACT (adaptive calibration timer) TTM (adaptive maintenance timer) DLI (Dynamic Life Time Indicator). The selected parameter is shown in the main display. Press **meas** to return to measurement.
Display examples:	
	Display mV_pH (for validation, sensor can be immersed in a calibration solution, for example, or the device is checked by using a simulator)
	Display of remaining dynamic lifetime (only for digital sensors, however not for MEMOSENS)
	Display of sensor operating time (for digital sensors only)
	**Version** Display **of device type, software/hardware version** and **serial number** for all device components. Use the ▴ ▾ keys to switch between software and hardware version. Press **enter** to proceed to next device component.

In the Service mode you can access the following menus:

MONITOR	Displaying currently measured values
SENSOR	Resetting TTM (ISM only), incrementing the autoclaving counter
OUT1	Testing current output 1
OUT2	Testing current output 2
CODES	Assigning and editing passcodes
DEFAULT	Resetting the device to factory settings
OPTION	Enabling options via TAN.

Note:
HOLD is active during Service mode!

Action	Key/Display	Remark
Activate Service		Press **menu** key to call the selection menu. Select SERVICE using ◀ ▶ keys, press **enter** to confirm.
Passcode		Enter passcode "5555" for service mode using the ▲ ▼ ◀ ▶ keys. Press **enter** to confirm.
Display		In service mode the following icons are displayed: • [diag] mode indicator • HOLD triangle • Service (wrench)
Exit	**meas**	Exit by pressing **meas**.

Menu item	Remark
 Display example: 	**Displaying currently measured values (sensor monitor) with HOLD mode activated:** Select MONITOR using ◂ ▸, press **enter** to confirm. Select variable in the bottom text line using ◂ ▸. The selected parameter is shown in the upper display line. As the device is in HOLD mode, you can perform validations using simulators without influencing the signal outputs. Return to Service menu: Hold **meas** depressed for longer than 2 sec. Press **meas** once more to return to measurement.
SENSOR / TTM 	**Resetting the adaptive maintenance timer** Here, the interval is reset to its initial value. To do so, select **"TTM RESET = YES"** and confirm by pressing **enter**.
SENSOR / AUTOCLAVE 	**Incrementing the autoclaving counter** After having completed an autoclaving process, you must increment the autoclaving count. To do so, select "**YES**" and confirm by pressing **enter**. The device confirms with "INCREMENT AUTOCLAVE CYCLE".
	**Specifying the current at outputs 1 and 2:** Select OUT1 or OUT2 using the ◂ ▸ keys, press **enter** to confirm. Enter a valid current value for the respective output using ▲ ▼ ◂ ▸ keys. Press **enter** to confirm. For checking purposes, the actual output current is shown in the bottom right corner of the display. End by pressing **enter** or **meas**.

Menu item	Remark
	**Assigning passcodes:** In the "SERVICE - CODES" menu you can assign passcodes to DIAG, HOLD, CAL, CONF and SERVICE modes (Service preset to 5555). **When you have lost the Service passcode**, you have to request an "Ambulance TAN" from the manufacturer specifying the serial number of your device. To enter the "Ambulance TAN", call the Service function and enter passcode 7321. After correct input of the ambulance TAN the device signals "PASS" for 4 sec and resets the Service passcode to 5555.
	**Reset to factory settings:** In the "SERVICE - DEFAULT" menu you can reset the device to factory settings. ***NOTICE*** After a reset to factory setting the device must be reconfigured completely, including the sensor parameters!
	**Option request:** Communicate the serial number and hardware/software version of your device to the manufacturer. These data can be viewed in the Diagnostics/Version menu. The "transaction number" (TAN) you will then receive is only valid for the device with the corresponding serial number. **Releasing an option:** Options come with a "transaction number" (TAN). To release the option, enter this TAN and confirm by pressing **enter**.

Maintenance

Stratos Pro does not require maintenance.
If maintenance work (e.g., sensor replacement) has to be performed at the measuring point, you must activate the function check (HOLD) mode on the device as follows:

- Opening the Calibration menu
- Opening the Service menu
- Opening the Confiuration menu

Repair

The Stratos Pro and the measuring modules cannot be repaired by the user. To request a repair, please contact Knick Elektronische Messgeräte GmbH & Co. KG by visiting www.knick.de.

	-11- Hamilton A	2.00/4.01/7.00/9.00/11.00
	-12- Hamilton B	2.00/4.01/6.00/9.00/11.00
	-13- Kraft	2.00/4.00/7.00/9.00/11.00
	-U1-	Specifiable buffer set with 2 buffer solutions
Zero adjustment	± 200 mV (for ISFET)	
Max. calibration range	Asymmetry potential	±60 mV
	Slope	80 ... 103 % (47.5 ... 61 mV/pH)
	(possibly restricting notes from Sensoface)	
ORP sensor standardization*	ORP calibration (zero adjustment)	
Max. calibration range	–700 ... +700 ΔmV	
Adaptive cal timer*	Interval 0000 ... 9999 h (Patent DE 101 41 408)	
Sensocheck	Automatic monitoring of glass electrode (can be disabled)	
Delay	Approx. 30 s	
Sensoface	Provides information on the sensor condition, evaluation of zero/slope, response time, calibration interval, wear, Sensocheck, can be switched off	

I input (TAN)	Current input 0/4 ... 20 mA / 50 Ω for external temperature signal		
Start/end of scale	Configurable -20 ... 200 °C / –4 ... 392 °F		
Characteristic	Linear		
Resolution	approx. 0.05 mA		
Measurement error [1,3)]	< 1 % of current value + 0.1 mA		
HOLD input (TAN)	Galvanically isolated (optocoupler)		
Function	Switches device to HOLD mode		
Switching voltage	0 ... 2 V AC/DC	HOLD inactive	
	10 ... 30 V AC/DC	HOLD active	
CONTROL input (TAN)	Galvanically isolated (optocoupler)		
Function	Switch between parameter sets A/B or flow measurement (FLOW)		
Parameter set A/B	Control input	0 ... 2 V AC/DC	Parameter set A
		10 ... 30 V AC/DC	Parameter set B
FLOW	Pulse input for flow measurement 0 ... 100 pulses/s Pulse amplitude 10 ... 30 V DC		
Message	via 22 mA		
Display	00.0 … 99.9 l/h		
Output 1	4 … 20 mA current loop, floating, reverse polarity protected HART communication (see below for specifications)		
Supply voltage	14 ... 30 V		
Process variable [*)]	pH, ORP, rH (with pH/ORP combo sensor only), or temperature		
Characteristic	Linear		
Resolution	approx. 0.05 mA		
Overrange [*)]	22 mA in the case of error messages		
Output filter *	PT_1 filter, filter time constant 0 ... 120 s		
Measurement error [1)]	< 0.25% of current value + 0.025 mA		
Start/end of scale *	Configurable within selected range		

Output 2 For version with 2nd current output only	4 … 20 mA current loop, floating, reverse polarity protected
Supply voltage	14 ... 30 V
Process variable *)	pH, ORP, rH (with pH/ORP combo sensor only), or temperature
Characteristic	Linear
Resolution	approx. 0.05 mA
Overrange *)	22 mA in the case of error messages
Output filter *	PT_1 filter, filter time constant 0 ... 120 s
Measurement error 1)	< 0.25% of current value + 0.05 mA
Start/end of scale *	Configurable within selected range
Real-time clock	Different time and date formats selectable
Power reserve	> 5 days
Display	LC display, 7-segment with icons
Main display	Character height approx. 22 mm, unit symbols approx. 14 mm
Secondary display	Character height approx. 10 mm
Text line	14 characters, 14 segments
Sensoface	3 status indicators (friendly, neutral, sad face)
Status indicators	meas, cal, conf, diag Further icons for configuration and messages
Alarm indication	Display blinks and red backlighting
Keypad	Keys: meas, menu, info, 4 cursor keys, enter
HART communication (TAN)	HART version 6 Digital communication via FSK modulation of output current 1 Device identification, measured values, status and messages, parameter setting, calibration, logs
FDA 21 CFR Part 11	Access control via editable passcodes, logbook entry and flag via HART in the case of configuration changes Message and logbook entry when housing is opened

Diagnostic functions	
Calibration data	Calibration date, zero, slope, response time
Device self-test	Display test, Automatic memory test (RAM, FLASH, EEPROM), module test
Logbook (TAN)	100 events with date and time
Extended logbook (TAN)	Audit Trail: 200 events with date and time
Service functions	
Sensor monitor	Display of direct sensor signals
Current source	Current specifiable for output 1 and 2 (04.00 ... 22.00 mA)
Passcodes	Assignment of passcodes for access to menus
Factory setting	Reset all parameters to factory settings
TAN	Enable optionally available add-on functions
Data retention	Parameters, calibration data, and logbook > 10 years (EEPROM)
Housing	Molded enclosure, glass fiber reinforced Front unit material: PBT Rear unit material: PC
Mounting	Wall, pipe/post or panel mounting
Color	Gray RAL 7001
Ingress protection	IP66/IP67/TYPE 4X outdoor (with pressure compensation) when the device is closed
Flammability	UL 94 V-0 for external parts
Dimensions	148 mm x 148 mm
Control panel cutout	138 mm x 138 mm acc. to DIN 43 700
Weight	approx. 1200 kg (1.6 kg incl. accessories and packaging)
Cable glands	5 knockouts for M20 x 1.5 cable glands 2 of 5 knockouts for NPT ½" or rigid metallic conduit
Terminals	
Screw terminals	for single or stranded wires 0.2… 2.5 mm^2
Tightening torque	0.5 … 0.6 Nm

Wiring	
Stripping length	Max. 7 mm
Temperature resistance	> 75 °C / 167 °F
Rated operating conditions	
Climatic class	3K5 according to EN 60721-3-3
Location class	C1 according to EN 60654-1
Ambient temperature	–20 ... 65 °C / –4 ... 149 °F
Relative humidity	5 ... 95 %
Supply voltage	14 ... 30 V
Transport and storage	
Transport / storage temperature	–30 ... 70 °C / –22 ... 158 °F
EMC	
Emitted interference	Class A (industrial applications) [4]
Immunity to interference	Industrial applications

*) User-defined

1) At rated operating conditions

2) ± 1 digit

3) Plus sensor error

4) This equipment is not designed for domestic use, and is unable to guarantee adequate protection of the radio reception in such environments.

Note: The actual pH values of the individual batches of the reference materials are documented in a certificate of an accredited laboratory. This certificate is supplied with the respective buffers. Only these pH(S) values shall be used as standard values for the secondary reference buffer materials. Correspondingly, this standard does not include a table with standard pH values for practical use. The table above only provides examples of pH(PS) values for orientation.

* Values complemented

-U1- Specifiable Buffer Set

You can specify a buffer set with 2 buffer solutions in the temperature range of 0 ... 95 °C, step width: 5 °C.
To do so, select buffer set -U1- in the configuration menu.
As delivered, the Ingold technical buffer solutions pH 4.01 / 7.00 are stored as buffer set and can be edited.

Conditions for the specifiable buffer set:

- All values must lie in the range pH 0 ... 14
- Maximum difference between two adjacent pH values (5 °C step width) of the same buffer solution: pH 0.25
- The values of buffer solution 1 must be lower than those of buffer solution 2:
  The difference between values for identical temperatures must be greater than 2 pH units.

Faulty entries are indicated in measuring mode by the "FAIL BUFFERSET -U1-" message.

The 25 °C value is always used for buffer display during calibration.

Step	Action/Display	Remark
Select buffer set -U1- (CONFIG / SNS menu)		
Select buffer solution 1 for editing	 Select "YES" using up/ down key.	You are prompted for confirmation to prevent accidental changes of the settings.
Editing the values of buffer solution 1	 Edit using arrow keys, press **enter** to confirm and proceed to next temperature value. 	Enter the values for the first buffer solution in 5°C steps. The difference to the next value must not exceed 0.25 pH unit.
Select buffer solution 2 for editing		The difference between buffer solutions for identical temperatures must be greater than 2 pH units.

Buffer Set U1:
Fill in your configuration data or use the table as original for copy.

Alarm condition:

- The display backlighting turns **red**
- The alarm icon  is displayed
- The complete measured-value display blinks
- "**ERR xxx**" is displayed in the lower menu line

Press the [**info**] key to view a short error text:

- The error text appears in the lower menu line
- The main display reads "**InFo**".

Parameter errors:

Configuration data such as current range, limit values, etc are checked during the input.
If they are out of range,

- "**ERR xxx**" is displayed for 3 sec,
- the display backlighting flashes red,
- the respective maximum or minimum value is shown,
- input must be repeated.

If a faulty parameter arrives through the interface (HART),

- an error message will be displayed: "**ERR 100...199**"
- the faulty parameter can be localized by pressing the [**info**] key

Calibration errors:

If errors occur during calibration,

- an error message will be displayed

Sensoface:

If the Sensoface becomes sad,

- the display backlighting will turn magenta (purple)
- the cause can be seen by pressing the **info** key
- the calibration data can be seen in the Diagnostics menu

Error Messages

Error	**Info text** (is displayed in case of fault when the Info key is pressed)	**Problem Possible causes**
ERR 99	DEVICE FAILURE	**Error in factory settings** EEPROM or RAM defective This error message only occurs in the case of a total defect. The device must be repaired and recalibrated at the factory.
ERR 98	CONFIGURATION ERROR	**Error in configuration or calibration data** Memory error in device program Configuration or calibration data defective; completely reconfigure and recalibrate the device.
ERR 97	NO MODULE INSTALLED	"MEMOSENS" not selected as sensor type
ERR 96	WRONG MODULE	"MEMOSENS" not selected as sensor type
ERR 95	SYSTEM ERROR	**System error** Restart required. If error still persists, send in the device for repair.
ERR 01	NO SENSOR	**pH sensor *** The sensor is not recognized: Check connections. Check cables/sensor. Replace as required.
ERR 02	WRONG SENSOR	**Wrong sensor *** Replace the sensor.
ERR 04	SENSOR FAILURE	**Failure in sensor *** Replace the sensor.

Error	Info text (is displayed in case of fault when the Info key is pressed)	Problem Possible causes
ERR 05	CAL DATA	**Error in cal data ***
ERR 10	ORP RANGE	**ORP display range limits exceeded** < -1999 mV or > 1999 mV
ERR 11	PH RANGE	**pH display range limits exceeded** < -2 or > 16
ERR 12	MV RANGE	**mV range**
ERR 13	TEMPERATURE RANGE	**Temperature range limits exceeded** Connect the sensor, check the sensor cable and replace if necessary, check the sensor connection, adjust the parameter settings.
ERR 15	SENSOCHECK GLASS-EL	**Sensocheck glass**
ERR 16	SENSOCHECK REF-EL	**Sensocheck ref.**
ERR 60	OUTPUT LOAD	**Load error** Check the current loop, deactivate unused current outputs.
ERR 61	OUTPUT 1 TOO LOW	**Output current 1** < 3.8 mA
ERR 62	OUTPUT 1 TOO HIGH	**Output current 1** > 20.5 mA
ERR 63	OUTPUT 2 TOO LOW	**Output current 2** < 3.8 mA
ERR 64	OUTPUT 2 TOO HIGH	**Output current 2** > 20.5 mA

*) Digital sensors (ISM, InduCon, Memosens)

Error	**Info text** (is displayed in case of fault when the Info key is pressed)	**Problem** **Possible causes**
ERR 69	TEMP. OUTSIDE TABLE	**Temperature** value outside table
ERR 72	FLOW TOO LOW	**Flow** too low
ERR 73	FLOW TOO HIGH	**Flow** too high
ERR 100	INVALID SPAN OUT1	**Span Out1 configuration error** Selected span too small
ERR 101	INVALID SPAN OUT2	**Span Out2 configuration error** Selected span too small
ERR 102	FAILURE BUFFERSET -U1-	**Configuration error** Specifiable buffer set U1
ERR 105	INVALID SPAN I-INPUT	**Configuration error** Current input

Disposal

Local codes and regulations must be observed when disposing of the product.

Returns

If required, send the product in a clean condition and securely packed to your local contact. See www.knick.de.

(Sensocheck must have been activated during configuration.)

The smiley in the display (Sensoface) alerts to sensor problems (defective sensor, sensor wear, defective cable, maintenance request). The permitted calibration ranges and the conditions for a friendly, neutral, or sad Sensoface are summarized in the following table. Additional icons refer to the error cause.

Sensocheck
Continuously monitors the sensor and its wiring.
Critical values make the Sensoface "sad" and the corresponding icon blinks:

The Sensocheck message is also output as error message Err 15 (glass electrode) or Err 16 (reference electrode – for digital transmitters, however only with InduCon sensors with SG). The display backlighting turns red, output current 1 is set to 22 mA (when configured correspondingly).
Sensocheck can be switched off during configuration (then Sensoface is also disabled).
Exception:
After a calibration a smiley is always displayed for confirmation.

Note:
The worsening of a Sensoface criterion leads to the devaluation of the Sensoface indicator (Smiley becomes "sad"). An improvement of the Sensoface indicator can only take place after calibration or removal of the sensor defect.

Display	Problem	Status	
	Asymmetry potential and slope		Asymmetry potential (zero) and slope of the sensor are still okay. The sensor should be replaced soon.
			Asymmetry potential and slope of the sensor have reached values which no longer ensure proper calibration. Replace sensor.
	Calibration timer		Over 80% of the calibration interval has already past.
			The calibration interval has been exceeded.
	Sensor defect		Check the sensor and its connections (see also Error Messages Err 15 and Err 16).
	Response time		Sensor response time has increased. The sensor should be replaced soon. To achieve an improvement, clean the sensor and soak it in buffer.
			Sensor response time significantly increased (> 72 s, calibration aborted after 120 s) Replace sensor.

Display	Problem	Status	
	Sensor wear (for digital sensors only)		High temperatures and pH values have caused a wear of over 80%. The sensor should be replaced soon.
			Wear is at 100%. Replace sensor.
SENSOR WEAR CHANGE SENSOR (DLI)		Replace sensor	
AUTOCLAVE CYCLES OVERRUN		Maximally permitted number of auto-claving cycles has been reached. Replace sensor or increment autoclaving counter.	
SIP CYCLES OVERRUN		Maximally permitted number of sterilizing cycles has been reached. Replace sensor or increment SIP counter.	
CIP CYCLES OVERRUN		Maximally permitted number of cleaning cycles has been reached. Replace sensor or increment CIP counter.

Conformity with FDA 21 CFR Part 11

In their directive "Title 21 Code of Federal Regulations, 21 CFR Part 11, Electronic Records; Electronic Signatures" the American health agency FDA (Food and Drug Administration) regulates the production and processing of electronic documents for pharmaceutical development and production. This results in requirements for measuring devices used for corresponding applications. The following features ensure that the measuring devices of this Series meet the demands of FDA 21 CFR Part 11:

Electronic Signature – Passcodes

Access to the device functions is regulated and limited by individually adjustable codes – "Passcodes" (see SERVICE). This prevents unauthorized modification of device settings or manipulation of the measurement results. Appropriate use of these passcodes makes them suitable as electronic signature.

Audit Trail

Every (manual) change of device settings can be automatically documented. Each change is tagged with a "Configuration Change Flag", which can be interrogated and documented using HART communication. Altered device settings or parameters can also be retrieved and documented using HART communication.

Extended logbook (TAN SW-A003)

Audit Trail also records function activations (CAL, CONFIG, SERVICE), some Sensoface messages (cal timer, wear, SIP, CIP) and opening of the enclosure.
