User Manual	# Stratos MS A405 Conductivity Measurement
Supplemental Directives

Read this document and retain it for future reference. Before assembling, installing, operating, or maintaining the product, ensure that you fully understand the instructions and risks. Observe all safety instructions. Failure to follow the instructions in this document may result in serious injury and/or property damage.

This document is subject to change without notice.

These supplemental directives explain how safety information is laid out in this document and what content it covers.

Safety Chapter

This document's Safety chapter is designed to give the reader a basic understanding of safety. It illustrates general hazards and gives strategies on how to avoid them.

Safety Guide

The external Safety Guide is designed to give the reader a basic understanding of safety. It illustrates general hazards and suggests strategies on how to avoid them.

Warnings

This document uses the following warnings to indicate hazardous situations:

Symbol	Category	Meaning	Remark
⚠	WARNING	Designates a situation that can lead to death or serious (irreversible) injury.	The warnings contain information on how to avoid the hazard.
⚠	CAUTION	Designates a situation that can lead to slight or moderate (reversible) injury.	
None	NOTICE	Designates a situation that can lead to property or environmental damage.

Safety

Always Read and Observe the Safety Instructions!
The device is constructed in accordance with the latest technology and generally accepted safety rules and regulations.
Under certain circumstances, however, usage may pose risks to users or cause damage to the device.

Commissioning must be carried out by specialist personnel authorized by the operating company. If safe operation is not possible, the device must not be switched on or, if it is already on, must be switched off properly and secured against unintended operation.
Reasons to assume safe operation is not possible:
- the device shows visible damage
- failure to perform the intended function
- prolonged storage at temperature of below -30 °C/-22 °F or above 70 °C/158 °F
- severe transport stresses

Before recommissioning the device, a professional routine test must be performed. This test should be carried out by the manufacturer at its factory.

Mains Connection
The device does not have a power switch. An appropriately arranged and accessible disconnecting device for the transmitter must be present in the system installation. The disconnecting device must disconnect all non-grounded, current-carrying wires. The disconnecting device must be labeled in a way that enables the associated transmitter to be identified. The power line may carry dangerous touch voltages. Touch protection must be ensured by proper installation.

Personnel Requirements
Customer shall ensure that any personnel using or otherwise interacting with the product is adequately trained and has been properly instructed.
The operating company shall comply and cause its personnel to comply with all applicable laws, regulations, codes, ordinances and relevant industry qualification standards related to product. Failure to comply with the foregoing shall constitute a violation of operating company's obligations concerning the product, including but not limited to an unintended use as described in this document.

Intended Use

Stratos MS is a 4-wire analyzer for use with Memosens sensors. Current is provided through a universal power supply 80 ... 230 V AC, 45 ... 65 Hz / 24 ... 60 V DC.
The analyzer provides two 0 (4) .... 20 mA current outputs for transmission of measured value and temperature, for example.
Two floating relay contacts are available for free configuration.

You can select one of the following measuring functions:

*   pH
*   ORP
*   Dissolved oxygen
*   Conductivity measurement (conductive/inductive)

The defined rated operating conditions must be observed when using this product. They can be found in the Specifications chapter of this User Manual; see page 92.

Function Check Mode (HOLD Function)

After activating configuration, calibration, or service, Stratos MS enters function check mode (HOLD).
The current outputs respond in accordance with the configuration.
Operations must not be carried out while Stratos Pro is in function check (HOLD) mode, as the system may behave unexpectedly and put users at risk.

Introduction

Enclosure and mounting possibilities
- The sturdy molded enclosure is rated IP66/IP67 / TYPE 4X Outdoor.
  Material of front unit: PBT, rear unit: PC.
  Dimensions: H 148 mm, W 148 mm, D 117 mm.
  It is provided with knockouts to allow:
- panel mounting (138 mm x 138 mm cutout to DIN 43700)
- wall mounting (with sealing plugs to seal the enclosure)
- post/pipe mounting (dia. 40 … 60 mm, □ 30 … 45 mm)

Protective hood (accessory)
The protective hood provides additional protection against direct weather exposure and mechanical damage (available as accessory).

Connection of sensors, cable glands
For connecting the cables, the enclosure provides
- 3 knockouts for cable glands M20x1.5
- 2 knockouts for NPT 1/2" or rigid metallic conduit

For quasi-stationary installations with Memosens sensors, we recommend using the M12 socket accessory (ZU0822) instead of a cable gland – which allows simple replacement of the sensor cable without opening the device.

Memosens sensors and connecting cables
Please visit our website for more information on our product range: **www.knick.de.**

Package Contents

Check the shipment for transport damage and completeness.

The package should contain:
Front unit, rear unit, bag containing small parts
Specific test report
Documentation

Fig.: Assembling the enclosure

1) Insertable jumper (3x)
2) Plate (1x), for conduit mounting: Plate between housing and nut
3) Cable tie (3x)
4) Hinge pin (1x), insertable from either side
5) Enclosure screw, captive (4x)

6) Blanking plug (2x)
7) Reduction sealing insert (1x)
8) Cable gland (3x)
9) Blanking cap (2x)
10) Hex nut (5x)
11) Plastic sealing plug (2x), for sealing in case of wall mounting

Assembly

Mounting Plan, Dimensions
1) Cable gland (3x)
2) Knockouts for cable gland or ½" conduit, dia. 21.5 mm (2 knockouts). Conduit couplings not included!
3) Knockout for pipe mounting (4x)
4) Knockout for wall mounting (2x)

Memosens Sensors

Start-Up

When a Memosens sensor is connected, the appropriate measuring function (device type) is automatically loaded.

Changing the Measuring Function

In the "Service" menu you can select another measuring function at any time.

Calibration and Maintenance in the Lab

The "MemoSuite" software allows calibrating Memosens sensors under reproducible conditions at a PC in the lab. The sensor parameters are registered in a database. Documenting and archiving meet the demands of FDA CFR 21 Part 11. Detailed reports can be output as csv export for Excel. MemoSuite is available as accessory and comes in the versions "Basic" and "Advanced": www.knick.de.

Settings and specifications

Connected sensor: sensor type, manufacturer, order code and serial number

Function selection: The selected function is highlighted.

Connected sensor: sensor type, manufacturer, order code and serial number, measuring point and tag number

Last adjustment

You can magnify a measured-value display at a click of the mouse.

15

Wiring Example SE670 / SE680

Device

| 1 | 2 | 3 | 4 |

+ 3 V — RS485 (A) — RS485 (B) — GND / shield

Cable

Brown — Green — Yellow — White — Transparent
Sensor

Connect the SE670 / SE680 sensor to the RS-485 interface of the device. When SE670 / SE680K is selected as sensor in the Configuration menu, the default values are taken as calibration data. They can then be modified by calibration.
All calibration data of the SE680M sensor with Memosens protocol are stored in the sensor.
Measuring Mode

After the operating voltage has been connected, the analyzer automatically goes to "Measuring" mode. To call the measuring mode from another operating mode (e.g., Diagnostics, Service): Hold **meas** key depressed (> 2 s).

Operation

Display in Measuring Mode
The MAIN DISPLAY is the display which is shown in measuring mode. To call the measuring mode from any other mode, hold the **meas** key depressed for at least 2 sec.
meas key

enter key

meas

meas

approx. 2 s

By pressing **meas** briefly you can step through further displays such as primary value or tag number (TAG).
After 60 sec they switch back to the main display.

Press **enter** to select a display as MAIN DISPLAY (displayed permanently in measuring mode).

The secondary display shows "MAIN DISPLAY – NO".

Use the **UP** / **DOWN** arrows to select "MAIN DISPLAY – YES" and confirm by pressing **enter**. This display is now shown in measuring mode.
To select the operating mode:
1) Hold **meas** key depressed (> 2 s) (measuring mode)
2) Press **menu** key: the selection menu appears
3) Select operating mode using left / right arrow key
4) Press **enter** to confirm the selected mode

Selection menu

Selected mode
(blinks)
To enter a value:
5) Select numeral: left / right arrow
6) Change numeral: up / down arrow
7) Confirm entry by pressing **enter**

21

Operating Modes

Diagnostics
Display of calibration data, display of sensor data, sensor monitor, performing a device self-test, viewing the logbook entries, display of hardware/software versions of the individual components. The logbook can store 100 events (00...99). They can be displayed directly on the device.

HOLD
Manual activation of HOLD mode, e.g., for replacing a sensor.
The signal outputs adopt a defined state. HOLD can also be activated via the external input (see next page).

Calibration
Every sensor has typical characteristic values, which change in the course of the operating time. Calibration is required to supply a correct measured value. The device checks which value the sensor delivers when measuring in a known solution. When there is a deviation, the device can be "adjusted". In that case, the device displays the "actual" value and internally corrects the measurement error of the sensor. Calibration must be repeated at regular intervals. The time between the calibration cycles depends on the load on the sensor. During calibration the device is in HOLD mode.
During calibration the device remains in the HOLD mode until it is stopped by the operator.

Configuration
You must configure the analyzer for the respective measurement task. In the "Configuration" mode you select the connected sensor, the measuring range to be transmitted, and the conditions for warning and alarm messages. During configuration the device is in HOLD mode.
Configuration mode is automatically exited 20 minutes after the last keystroke. The device returns to measuring mode.

Service
Maintenance functions (current source, relay test), assigning passcodes, selecting the device type (pH/oxy/conductivity), resetting to factory settings.

The HOLD mode is a safety state during configuration and calibration.
Output current is frozen (LAST) or set to a fixed value (FIX).
Alarm and limit contacts are disabled.
HOLD mode, display icon:

⚠
HOLD

Output signal response

- **LAST:** The output current is frozen at its last value. Recommended for short configuration procedures. The process should not change decisively during configuration. Changes are not noticed with this setting!
- **FIX:** The output current is set to a value that is noticeably different from the process value to signal the control system that the device is being worked at.

Output signal during HOLD:
Terminating the HOLD mode

The HOLD mode is exited by switching to measuring mode (hold **meas** key depressed). The display reads "Good Bye". After that, the HOLD mode is exited. When the calibration mode is exited, a confirmation prompt ensures that the installation is ready for operation (e.g.: sensor reinstalled, located in process).

External activation of HOLD

The HOLD mode can be activated from outside by sending a signal to the HOLD input (e.g., from the process control system).

HOLD inactive	0...2 V AC/DC
HOLD active	10...30 V AC/DC

Operating Modes / Functions

Measuring mode (main display selectable)	**meas** →	TAG display	**meas** →	CLK display	**meas** →
		↓ after 60 s		↓ after 60 s	

Pressing the **menu** key (down arrow) opens the selection menu.
Select the menu group using the left/right arrow keys.
Pressing **enter** opens a menu item. Press **meas** to return.

DIAG

CALDATA	Display of calibration data
SENSOR	Display of sensor data
SELFTEST	Self test: RAM, ROM, EEPROM, module

Connecting a Memosens Sensor

Step	Action/Display	Remark
Connect sensor	☑ - - - - **i** ☺ NO SENSOR meas	When no Memosens sensor is connected, the error message "NO SENSOR" is displayed.
Wait until the sensor data are displayed.	SEnSoR IDENTIFICATION meas	The hourglass in the display blinks.
Check sensor data	☺ SEnSoR ⚠HOLD MEMOSENS ▶ meas ⏎ View sensor information using ◀ ▶ keys, confirm using **enter**.	Sensoface is friendly when the sensor data are okay.
Go to measuring mode	Press **meas**, **info** or **enter**	After 60 sec the device automatically returns to measuring mode (timeout).
Possible error message		
Sensor defective. Replace sensor	☒ - - - - **i** ☹ ◀ERR 004 SENSOR▶ meas	When this error message appears, the sensor cannot be used. Sensoface is sad.

Replacing a Sensor

Step	Action/Display	Remark
Select HOLD mode A sensor should only be replaced during HOLD mode to prevent unintended reactions of the outputs or contacts.	Press **menu** key to call the selection menu, select HOLD using the ◀ ▶ keys, press **enter** to confirm.	Now the device is in HOLD mode. The HOLD mode can also be activated externally via the HOLD input. During HOLD the output current is frozen at its last value or set to a fixed value.
Disconnect and remove old sensor		
Install and connect new sensor.		Temporary messages which are activated during the replacement are indicated but not output to the alarm contact and not entered in the logbook.
Wait until the sensor data are displayed.	⌛HOLD **5En5o̅R** IDENTIFICATION meas	
Check sensor data	☺°**5En5o̅R** HOLD MEMOSENS ▶ meas ↵ View sensor information using ◀ ▶ keys, confirm using **enter**.	You can view the sensor manufacturer and type, serial number and last calibration date.
Check measured values		
Exit HOLD	Hit **meas** key: Return to the selection menu. Hold **meas** key depressed: Device switches to measuring mode.	

Configuration

⚠️ **CAUTION!** Incorrect parameter settings or adjustments can result in incorrect outputs. Stratos MS must therefore be commissioned by a system specialist, all its parameters must be set, and it must be fully adjusted. For detailed information on parameter setting and adjustment, see the user manual

Configuring the Sensor

Device Type: Cond / CondI
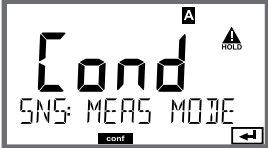

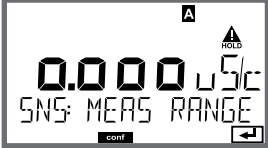

The device type is automatically selected upon first start-up. In the SERVICE menu you can change the device type. Afterwards, you must select the corresponding calibration mode in the CONF menu.

1 Press **menu** key.
2 Select **CONF** using ◀ ▶,
  press **enter**.
3 Select **SENSOR** menu using ◀ ▶ keys,
  press **enter**.
  All items of this menu group are indicated by the
  "SNS:" code.
  Press **enter** to select menu,
  edit using arrow keys (see next page).
  Confirm (and proceed) by pressing **enter**.
4 Exit: Press **meas** key until the [meas] mode indicator is
  displayed.

Select measuring mode
Select measuring range
Concentration determination

CHECK TAG	
CHECK GROUP	

Menu item	Action	Choices
TAG **On** SNSCHECK TAG HOLD conf	Select ON or OFF using ▲ ▼ keys. Press **enter** to confirm. When switched on, the entry for "TAG" in the Memosens sensor is compared to the entry in the analyzer. If the entries differ, a message will be generated.	ON/**OFF**
GROUP **On** SNSCHECK GROUP HOLD conf	Select ON or OFF using ▲ ▼ keys. Press **enter** to confirm. Function as described above	ON/**OFF**

Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated and Sensoface gets "sad". The "sad" Sensoface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.
When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Configuring the Current Output

Output Current: Range, Current Start/End

(Example: current output 1, device type Cond)
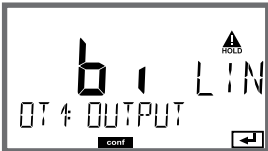

1 Press **menu** key.
2 Select **CONF** using ◀ ▶,
press **enter**.
3 Select **OUT1** menu using ◀ ▶ keys,
press **enter**.
4 All items of this menu group are indicated by the
"OT1:" code.
Press **enter** to select menu,
edit using arrow keys (see next page).
Confirm (and proceed) by pressing **enter**.
5 Exit: Press **meas** key until the [meas] mode indicator is
displayed.

Vertex of bilinear curve

Output current
[mA]
Example:
Current range 4 ... 20 mA
Current start: 0 µS/cm
Current end: 200 µS/cm
Vertex:
"CORNER X": 10 µS/cm (process variable)
"CORNER Y": 12 mA (output current)
Result: The output current change in the range 0 ... 10 µS/cm is much greater than in the range 10 ... 200 µS/cm.

Process variable
[µS/cm]

41

Output Current: Logarithmic Curve

Nonlinear output current characteristic: allows measurements over several decades, e.g., measuring very low values with a high resolution and high values with a low resolution.
Parameters required: Start and end value

Possible start and end values
The start value must be at least one decade lower than the end value. Start value and end value must be specified in the same units (either in µS/cm or in S/m, see listing):

1.0 µS/cm	
10.0 µS/cm	0.001 S/cm
100.0 µS/cm	0.01 S/cm
1.0 mS/cm	0.1 S/cm
10.0 mS/cm	1.0 S/cm
100.0 mS/cm	10.0 S/cm
1000 mS/cm	100 S/cm

The start value
is the next decade value below the lowest measured value.

The end value
is the next decade value above the highest measured value.

The number of decades results from:
Number of decades = log (end value) – log (start value)
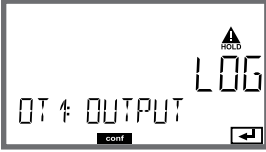

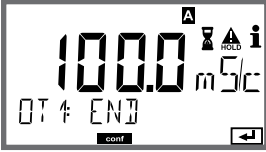

The output current value is defined as follows:

$$\text{Output current} = 16\,\text{mA} * \frac{\log(\text{measured value}) - \log(\text{start value})}{\text{Number of decades}} + 4\,\text{mA}$$

Menu item	Action	Choices

Time averaging filter

To smoothen the current output, a low-pass filter with adjustable filter time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time interval has been reached. The time interval can be set from 0 to 120 sec. If the time interval is set to 0 sec, the current output directly follows the input.

Note:

The filter only acts on the current output, not on the display or the limit values! During HOLD the filter is not applied. This prevents a jump at the output.
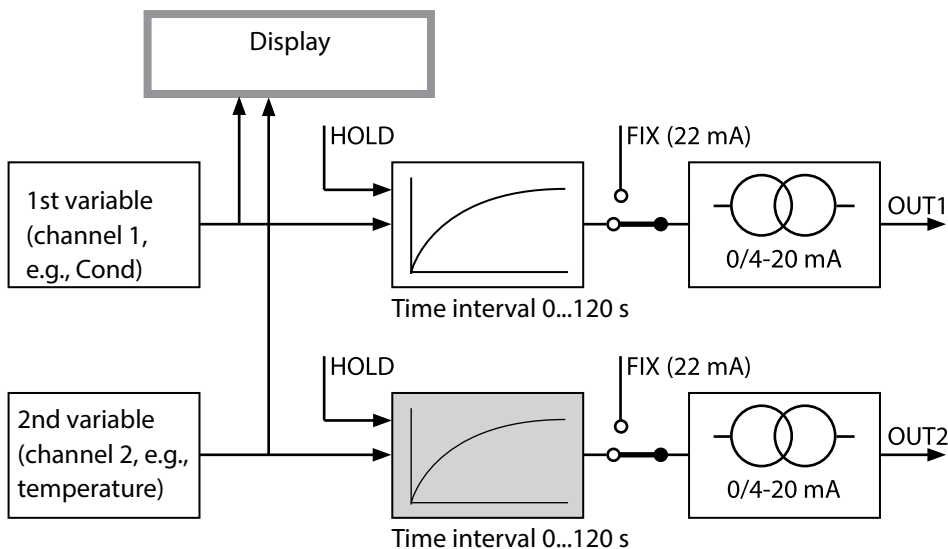

Output Current: Error and HOLD

Protective Wiring of Relay Contacts

Relay contacts are subject to electrical erosion. Especially with inductive and capacitive loads, the service life of the contacts will be reduced. For suppression of sparks and arcing, components such as RC combinations, nonlinear resistors, series resistors and diodes should be used.
Typical AC applications with inductive load
1 Load
2 RC combination,
    e.g., RIFA PMR 209
    Typical RC combinations for
    230 V AC:
    capacitor 0.1 μF / 630 V,
    resistor 100 Ω / 1 W
3 Contact

Typical Protective Wiring Measures
A: DC application with inductive load
B: AC/DC applications with capacitive load
C: Connection of incandescent lamps

A1   Inductive load
A2   Free-wheeling diode, e.g.,1N4007 (Observe polarity)
A3   Contact
B1   Capacitive load
B1   Resistor, e.g., 8 Ω / 1 W at 24 V / 0.3 A
B3   Contact
C1   Incandescent lamp, max 60 W / 230 V, 30 W / 115 V
C3   Contact

NOTICE! Make sure that the maximum ratings of the relay contacts are not exceeded even during switching, see page 95.

Time and Date

Control of the calibration and cleaning cycles is based on the time and date of the integrated real-time clock.

In measuring mode the time is shown in the lower display. When using digital sensors, the calibration data is written in the sensor head. In addition, the logbook entries (cf Diagnostics) are provided with a time stamp.
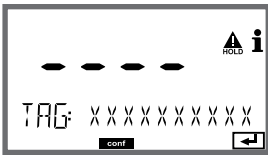

Note:

There is no automatic switchover from winter to summer time!

Be sure to manually adjust the time!

Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated and Sensoface gets "sad". The "sad" Sensoface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.

When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Menu item	Action	Choices
TAG of measuring point ⚠ ⓘ HOLD — — — — TAG: XXXXXXXXX conf ⏎	In the lower display line you can enter a designation for the measuring point (TAG) and for a group of measuring points (GROUP) if applicable. Up to 32 digits are possible. By pressing **meas** (repeatedly) in the measuring mode you can view the tag number. Select character using ▲ ▼ keys, select next digit using ◀ ▶ keys. Press **enter** to confirm.	A...Z, 0...9, − + < > ? / @ The first 10 characters are seen in the display without scrolling.
GROUP of measuring points	Select number using ▲ ▼ keys, select next digit using ◀ ▶ keys. Confirm by pressing **enter**	0000 ... 9999 **(0000)**

Calibration

Note:
• All calibration procedures must be performed by trained personnel. Incorrectly set parameters may go unnoticed, but change the measuring properties.

Calibration can be performed by:
• determining the cell constant (cell factor for toroidal sensors) with a known calibration solution
• entering the cell constant (cell factor for toroidal sensors)
• sampling (product calibration)
• zero calibration in air or with calibration solution (toroidal sensors)
• temperature probe adjustment

Selecting a Calibration Mode for 2-/4-Electrode Sensors

Calibration adapts the device to the individual sensor characteristics.
Access to calibration can be protected with a passcode (SERVICE menu).
First, you open the calibration menu and select the calibration mode:

CAL_SOL	Calibration with calibration solution
CAL_CELL	Calibration by input of cell constant
CAL_INSTALL	Calibration by input of an installation factor
P_CAL	Product calibration (calibration with sampling)
CAL_RTD	Temperature probe adjustment
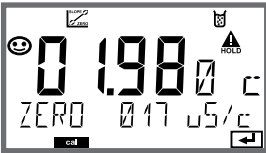

Selecting a Calibration Mode for Toroidal Sensors

CAL_SOL	Calibration with calibration solution
CAL_CELL	Calibration by input of cell factor
CAL_INSTALL	Calibration by input of an installation factor
P_CAL	Product calibration (calibration with sampling)
CAL_ZERO	Zero calibration
CAL_RTD	Temperature probe adjustment

Calibration with Calibration Solution

Input of temperature-corrected value of calibration solution with simultaneous display of cell constant (cell factor for toroidal sensors).

Display	Action	Remark

12.88 mS/c 0.10021 c 25.3°C cal	Immerse sensor in calibration solution. Enter the temperature-corrected value of the calibration solution using the arrow keys (see table). Press **enter** to confirm.	Lower line: display of cell constant (cell factor) and temperature
CELL c 0.12345 1/cm cal	**Contacting conductivity measurement (Cond)** The determined cell constant is displayed. The "hourglass" icon is blinking. Proceed by pressing **enter**	
01.980 c ZERO 017 uS/c cal	**Inductive conductivity measurement (CondI)** The determined cell factor and zero point are displayed. The "hourglass" icon is blinking. Proceed by pressing **enter**	

Display	Action	Remark
12.65 mS/c MEAS REPE	Display of selected process variable (here: mS/cm). Now the device is in HOLD mode: Reinstall the sensor and check whether the measurement is OK. MEAS exits calibration, REPEAT permits repetition.	
12.65 mS/c --- GOOD BYE ---	With MEAS selected: Press **enter** to exit calibration.	Display of conductivity and temperature, Sensoface is active. After end of calibration, the outputs remain in HOLD mode for a short time. After display of GOOD BYE, the device automatically returns to measuring mode.
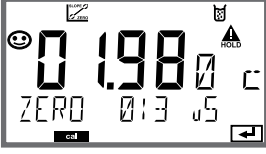

Note:
- Be sure to use known calibration solutions and the respective temperature-corrected conductivity values (see "Calibration Solutions" tables).
- Make sure that the temperature does not change during the calibration procedure.

Calibration by Input of Cell Constant / Cell Factor

You can directly enter the value for the cell constant / cell factor of a sensor. The value must be known, eg, determined beforehand in the laboratory. The selected process variable and the temperature are displayed. This method is suitable for all process variables.

Display	Action	Remark
SELECT ◁DIAG CAL CON▷	Select Calibration. Press **enter** to proceed. Select CAL_CELL calibration method. Press **enter** to proceed.	
CAL CELLFACTOR	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
01.12₃ 1288mS/c 234°C	Enter cell constant / cell factor. Press **enter** to proceed.	The selected process variable and the temperature are displayed.
01.98ø c ZERO 013 uS	The device shows the calculated values for the cell constant / cell factor and zero point (at 25 °C). Sensoface is active.	
12.65 mS/c MEAS REPE▷	**Use the arrow keys to select:** • MEAS (exit) • REPEAT Press **enter** to proceed.	Exit: HOLD is deactivated after a short time.

Please refer to the specifications in the sensor manual for the nominal cell constant / cell factor. When measuring in a restricted space, the individual cell constant / cell factor must be determined.

Calibration by Input of an Installation Factor

When using a sensor in a tight space, you can enter an installation factor.

Display	Action	Remark
SELECT ◄DIAG CAL CON►	Select Calibration. Press **enter** to proceed. Select CAL_INSTALL calibration method. Press **enter** to proceed.	
CAL ◄ CAL_INSTALL ►	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
1.000 12.68mS 23.4°C	Enter installation factor. Press **enter** to proceed.	The selected process variable and the temperature are displayed.
12.65 mS MEAS REPE►	**Use the arrow keys to select:** • MEAS (end) • REPEAT Press **enter** to proceed.	End: HOLD is deactivated after a short time.

Product Calibration

Calibration by sampling – for product calibration, the uncompensated conductivity (µS/cm, mS/cm, S/m) is used.

During product calibration the sensor remains in the process. The measurement process is only interrupted briefly.

Procedure:

1) The sample is measured in the lab or directly on the site using a portable meter. To ensure an exact calibration, the sample temperature must correspond to the measured process temperature.

   During sampling the analyzer saves the currently measured value and then returns to measuring mode. Then, the "calibration" mode indicator blinks.

2) In the second step you enter the measured sample value in the device. From the difference between the stored measured value and entered sample value, the device calculates the new cell constant (the new cell factor for toroidal sensors).

If the sample is invalid, you can take over the value stored during sampling. In that case, the old calibration values are stored. Afterwards, you can start a new product calibration.

Display	Action	Remark
☺ **SELE**[T DIAG CAL CON	Select Calibration. Press **enter** to proceed. Select P_CAL calibration method. Press **enter** to proceed.	
CAL PRODUCT STEP 1	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
12.88 mS/c STORE VALUE	Take sample and save value. Press **enter** to proceed.	Now the sample can be measured in the lab.

| Display	Action	Remark
☺ **12.82** mS/c 12:27 26.3°C meas cal	The device returns to measuring mode.	From the blinking CAL mode indicator, you see that product calibration has not been terminated.
CAL PRODUCT STEP 2 cal	**Product calibration step 2:** When the sample value has been determined, open the product calibration once more	Display (3 sec) Now the device is in HOLD mode.
12.15 mS/c 2 LAB VALUE cal	The stored value is displayed (blinking) and can be overwritten with the lab value. Press **enter** to proceed.	
☺ **CELL** c 012345 1/cm cal	Display of new cell constant / cell factor (based on 25°C). Sensoface is active. To exit calibration: Select MEAS, then **enter**	To repeat calibration: Select REPEAT, then **enter**
☺ **12.65** mS/c --- GOOD BYE --- meas	End of calibration	After end of calibration, the outputs remain in HOLD mode for a short time.

Service

In the Service mode you can access the following menus:

MONITOR	Displaying currently measured values
OUT1	Testing current output 1
OUT2	Testing current output 2
RELAIS	Testing the relay function
CODES	Assigning and editing passcodes
DEVICE TYPE	Selecting the device type (pH, Oxy, Cond)
DEFAULT	Resetting the device to factory settings

Note:
HOLD is active during Service mode!

Action	Key/Display	Remark
Activate Service	menu	Press **menu** key to call the selection menu. Select SERVICE using ◀ ▶ keys, press **enter** to confirm.
Passcode	5555 PASSCODE SERV	Enter passcode "5555" for service mode using the ▲ ▼ ◀ ▶ keys. Press **enter** to confirm.
Display	---- SRV	In service mode the following icons are displayed: • HOLD triangle • Service (wrench)
Exit	**meas**	Exit by pressing **meas**.

Service

Menu item	Remark
	Displaying currently measured values (sensor monitor) with HOLD mode activated: Select MONITOR using ◄ ▶ , press **enter** to confirm. Select the process variable in the bottom text line using ◄ ▶ . The selected parameter is shown in the upper display line. As the device is in HOLD mode, you can perform validations using simulators without influencing the signal outputs. Hold **meas** depressed for longer than 2 sec to return to Service menu. Press **meas** once more to return to measurement.
	Specifying the current for outputs 1 and 2: Select OUT1 or OUT2 using the ◄ ▶ keys, press **enter** to confirm. Enter a valid current value for the respective output using ▲ ▼ ◄ ▶ keys. Confirm by pressing **enter**. For checking purposes, the actual output current is shown in the bottom right corner of the display. Exit by pressing **enter** or **meas**.
	Relay test (manual test of contacts): Select RELAIS using ◄ ▶ , press **enter** to confirm. Now the status of the relays is "frozen". The 2 digits of the main display represent the respective states (from left to right: REL1, REL2). The selected digit blinks. Select one of the relays using the ◄ ▶ keys, close (1) or open (0) using the ▲ ▼ keys. Exit by pressing **enter**. The relays will be re-set corresponding to the measured value. Press **meas** to return to measurement.

Menu item	Remark
0000 PWI DIAG HOL	**Setting the passcodes:** In the "SERVICE - CODES" menu you can assign passcodes to DIAG, HOLD, CAL, CONF and SERVICE modes (Service preset to 5555). **When you have lost the** Service passcode, you have to request an "Ambulance TAN" from the manufacturer specifying the serial number and hardware version of your device. To enter the "Ambulance TAN", call the Service function and enter passcode 7321. After correct input of the ambulance TAN the device signals "PASS" for 4 sec and resets the Service passcode to 5555.
- - - NO FACTORY SETTIN	**Reset to factory settings:** In the "SERVICE - DEFAULT" menu you can reset the device to factory settings. **NOTICE!** After a reset to factory setting the device must be reconfigured completely, including the sensor parameters!

Operating Error!

Power Disruption while Loading the Process Variable

In very rare cases it seems that the analyzer cannot be operated because it remains in "Firmware Update" mode – indicated by the --FIRMW UPDATE-- message.
This occurs when the power is disrupted while the process variable is loaded.
Follow the instructions below to fix the error.

--FIRMW UPDATE--

Action	Key/Display	Remark
Device start	**53** % LOADING PH	If the power supply is disrupted while the process variable is loaded (e.g., during initial start-up or when changing the process variable), the following can occur:
Reconnecting the power supply	--FIRMW UPDATE--	After the power supply has been reconnected, the analyzer starts and then remains in --FIRMW UPDATE-- mode. If this occurs, disconnect the power supply.
Restoring the factory settings	menu	Press the ▲ ▼ keys simultaneously and hold them depressed while the analyzer is reconnected to the power supply.
Device start	**45.** % LOADING BASE	Release the keys when the display shows LOADING BASE. The analyzer will restart with the BASE software when 100 % is reached.

Action	Key/Display	Remark
Searching for the process variable	- - - - ⏳ SEARCHING	Then the analyzer searches for a measuring module or Memosens sensor.
Loading the process variable, automatic	🔧 **53**⏳% LOADING PH	When a module or a sensor has been found, the loading progress is shown in percentages.
Loading the process variable, manual	🔧 PH DEVICE TYPE ↵	If neither module nor sensor are found, the display shows DEVICE TYPE. The selected process variable blinks. You can modify it using the ▲ ▼ keys. Press **enter** to load the process variable displayed.
Loading ...	🔧 **100**⏳% LOADING PH	Make sure that the power supply is not interrupted before the **process variable is fully loaded (100%)**.

Error Messages

Error	Info text (is displayed in case of fault when the Info key is pressed)	Problem Possible causes
ERR 99	DEVICE FAILURE	**Error in factory settings** EEPROM or RAM defective This error message only occurs in the case of a total defect. The device must be repaired and recalibrated at the factory.
ERR 98	CONFIGURATION ERROR	**Error in configuration or calibration data** Configuration or calibration data defective; completely reconfigure and recalibrate the device.
ERR 95	SYSTEM ERROR	**System error** Restart required. If error still persists, send in the device for repair.
ERR 01	NO SENSOR	**Sensor error** Device type not assigned Defective sensor Sensor not connected Break in sensor cable
ERR 02	WRONG SENSOR	**Wrong sensor** Replace the sensor.
ERR 04	SENSOR FAILURE	**Failure in sensor** Replace the sensor.
ERR 05	CAL DATA	**Error in cal data**
ERR 10	CONDUCTANCE TOO HIGH	**Display range exceeded** Conductivity: Conductance > 3500 mS
ERR 11	RANGE	**Display range violation**
ERR 13	TEMPERATURE RANGE	**Temperature range exceeded** Connect the sensor, check the sensor cable and replace if necessary, check the sensor connection, adjust the parameter settings.

Error	Info text (is displayed in case of fault when the Info key is pressed)	Problem Possible causes
ERR 60	OUTPUT LOAD	**Load error** Check the current loop, deactivate unused current outputs.
ERR 61	OUTPUT 1 TOO LOW	**Output current 1** < 0 (3.8) mA
ERR 62	OUTPUT 1 TOO HIGH	**Output current 1** > 20.5 mA

Sensor GROUP does not correspond to device entry.	WRONG SENSOR GROUP xxxx

Sensocheck and Sensoface

Sensocheck, Sensoface Sensor Monitoring

Sensocheck continuously monitors the sensor and its wiring. The three Sensoface indicators provide information on required maintenance of the sensor. Additional icons refer to the error cause. Pressing the **info** key shows an information text.

Note:
The worsening of a Sensoface criterion leads to the devaluation of the Sensoface indicator (Smiley gets "sad"). An improvement of the Sensoface indicator can only take place after calibration or removal of the sensor defect.

Sensoface message
The Sensocheck message is also output as error message Err 15.
The alarm contact is active, the display backlighting turns red,
output current OUT is set to 22 mA (when configured correspondingly).
All other Sensoface message can be output via a contact
(relay contacts, alarm --> "FACE").

Disabling Sensocheck and Sensoface
Sensocheck can be switched off in the configuration menu (then Sensoface is also disabled).
Exception:
After a calibration, a smiley is always displayed for confirmation.

Decommissioning

Disposal

Local codes and regulations must be observed when disposing of the product.

Returns

If required, send the product in a clean condition and securely packed to your local
contact. See www.knick.de.

Ingress protection	IP66/IP67/TYPE 4X outdoor (with pressure compensation) when the device is closed
Flammability	UL 94 V-0 for external parts
Dimensions	H 148 mm, W 148 mm, D 117 mm
Control panel cutout	138 mm x 138 mm to DIN 43 700
Weight	1.2 kg (1.6 kg incl. accessories and packaging)
Cable glands	5 knockouts for M20 x 1.5 cable glands 2 of 5 knockouts for NPT ½" or rigid metallic conduit
Terminals	
Screw terminals	for single or stranded wires 0.2 … 2.5 mm²
Tightening torque	0.5 … 0.6 Nm

[1] This equipment is not designed for domestic use, and is unable to guarantee adequate protection of the radio reception in such environments.

Potassium Chloride Solutions

Measuring Ranges

Substance	Concentration ranges		
NaCl Configuration	0-26 wt% (0 °C / 32 °F) 0-26 wt% (100 °C / 212 °F) **-01-**		
HCl Configuration	0-18 wt% (−20 °C / −4 °F) 0-18 wt% (50 °C / 122 °F) **-02-**		22-39 wt% (−20 °C / −4 °F) 22-39 wt% (50 °C / 122 °F) **-07-**
NaOH Configuration	0-13 wt% (0 °C / 32 °F) 0-24 wt% (100 °C / 212 °F) **-03-**		15-50 wt% (0 °C / 32 °F) 35-50 wt% (100 °C / 212 °F) **-10-**
H_2SO_4 Configuration	0-26 wt% (-17 °C/-1.4 °F) 0-37 wt% (110 °C/230 °F) **-04-**	28-77 wt% (-17 °C/-1.4 °F) 39-88 wt% (115 °C/239 °F) **-09-**	94-99 wt% (-17 °C/-1.4 °F) 89-99 wt% (115 °C/239 °F) **-06-**
HNO_3 Configuration	0-30 wt% (−20 °C / −4 °F) 0-30 wt% (50 °C / 122 °F) **-05-**		35-96 wt% (−20 °C / −4 °F) 35-96 wt% (50 °C / 122 °F) **-08-**
$H_2SO_4 \cdot SO_3$ (Oleum) Configuration	13-45 wt% (0 °C / 32 °F) 13-45 wt% (120 °C / 248 °F) **-11-**		

For the solutions listed above, the device can determine the substance concentration from the measured conductivity and temperature values in % by wt. The measurement error is made up of the sum of measurements errors during conductivity and temperature measurement and the accuracy of the concentration curves stored in the device. We recommend to calibrate the device together with the sensor, e.g., directly to concentration using the CAL_CELL method. For exact temperature measurement, you should perform a temperature probe adjustment. For measuring processes with rapid temperature changes, use a separate temperature probe with fast response.

For specification of a concentration solution for conductivity measurement, see page 35.

Concentration Curves

-01- Sodium chloride solution NaCl
Concentration measurement not possible in this range.

Conductivity versus substance concentration and process temperature
for sodium chloride solution (NaCl)

-02- Hydrochloric acid HCl
-07-
Conductivity versus substance concentration and process temperature
for hydrochloric acid (HCl)
Source: Haase/Sauermann/Dücker; Z. phys. Chem. New Edition, Vol. 47 (1965)

-03- Sodium hydroxide solution NaOH
-10-

Concentration measurement not possible in this range.

Conductivity versus substance concentration and process temperature
for sodium hydroxide solution (NaOH)

-04- Sulfuric acid H_2SO_4
-06-
-09-
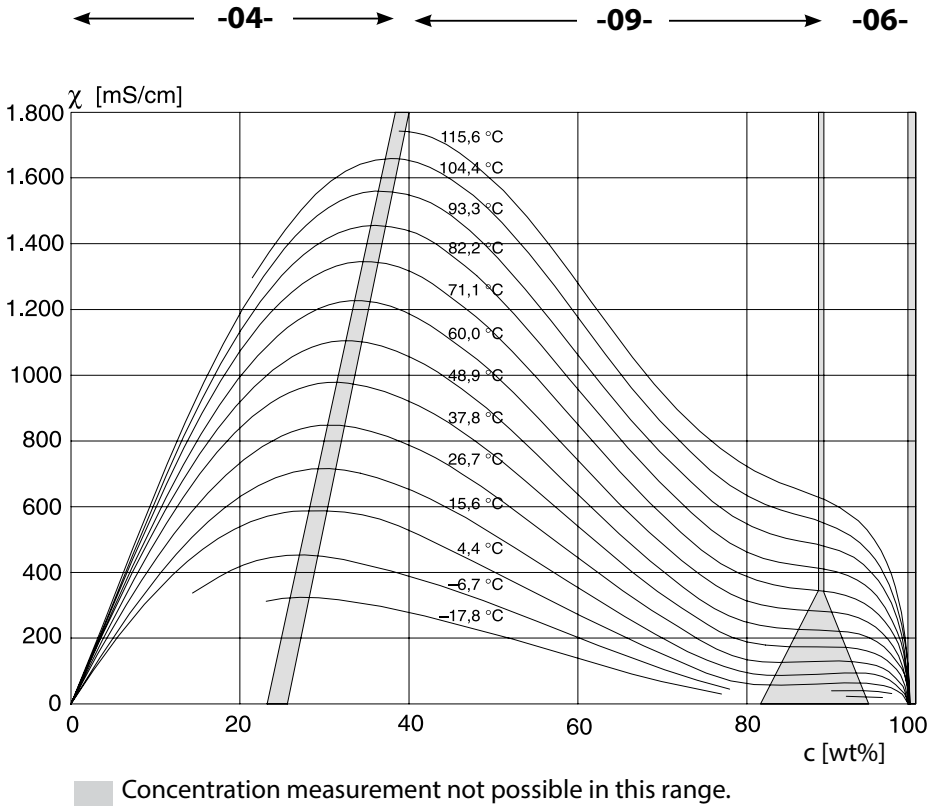

Conductivity versus substance concentration and process temperature
for sulfuric acid (H_2SO_4)
Source: Darling; Journal of Chemical and Engineering Data; Vol.9 No.3, July 1964

-05- Nitric acid HNO$_3$
-08-

Concentration measurement not possible in this range.
Conductivity versus substance concentration and process temperature
for nitric acid (HN0$_3$)
Source: Haase/Sauermann/Dücker; Z. phys. Chem. New Edition, Vol. 47 (1965)

-11- Oleum $H_2SO_4 \cdot SO_3$
