

# Protos II 4400(X) / Protos 3400(X) Process Analysis System

User Manual

## Protos LDO 4400-170 / LDO 3400-170 Measuring Module

For Optical Oxygen Measurement  
in Liquids and Gases

Latest Product Information: [www.knick.de](http://www.knick.de)

## Returns

Please contact our Service Team before returning a defective device. Ship the cleaned device to the address you have been given.

If the device has been in contact with process medium, it must be decontaminated/disinfected before shipment. In this case, place a Declaration of Contamination in the consignment to prevent any risk to the health and safety of our service personnel. The declaration is available at:

<https://www.knick-international.com/en/service/repairs/>

## Disposal

Please observe the applicable local or national regulations concerning the disposal of "waste electrical and electronic equipment".

## Trademarks

The following trademarks are used in this document without further marking:

Calimatic®, Protos®, Sensocheck®, Sensoface®, Unical®, VariPower®, Ceramat®, SensoGate®  
are registered trademarks of Knick Elektronische Messgeräte GmbH & Co. KG, Germany

Memosens®

is a registered trademark of

Endress+Hauser Conducta GmbH & Co. KG, Germany

Knick Elektronische Messgeräte GmbH & Co. KG, Germany

# Intended Use

---

The module is used to measure oxygen in liquids and gases using an SE 740 series optical sensor. It measures the partial pressure of oxygen, air pressure, and temperature simultaneously. It is also able to calculate and display the oxygen saturation and concentration as well as volume concentration in gases. The LDO 3400-170 / LDO 4400-170 module is not intended for operation in locations subject to explosion hazards.

## Safety Information

---

### **NOTICE!** Potential damage

Never try to open the module. Protos modules cannot be repaired by the user. For inquiries regarding module repair, please contact Knick Elektronische Messgeräte GmbH & Co. KG at [www.knick.de](http://www.knick.de).

### **Be sure to observe during installation:**

- Switch off power supply before replacing or inserting a module.
- Protect the signal inputs of the modules against electrostatic discharge.
- Before commissioning it must be proved that the device may be connected with other equipment.

# Firmware Version

Module compatibility	Protos 3400 FRONT firmware version A.0 or higher	Protos II 4400 FRONT firmware version 01.00.00 or higher
Protos LDO 3400-170 module	x <sup>1)</sup>	x <sup>2)</sup>
Protos LDO 4400-170 module	-	x <sup>3)</sup>

1) Module firmware version 01.00.00 or higher

2) Module firmware version 02.00.00 or higher

3) Module firmware version 01.00.00 or higher

## Query Current Device Firmware/Module Firmware

When the device is in measuring mode:

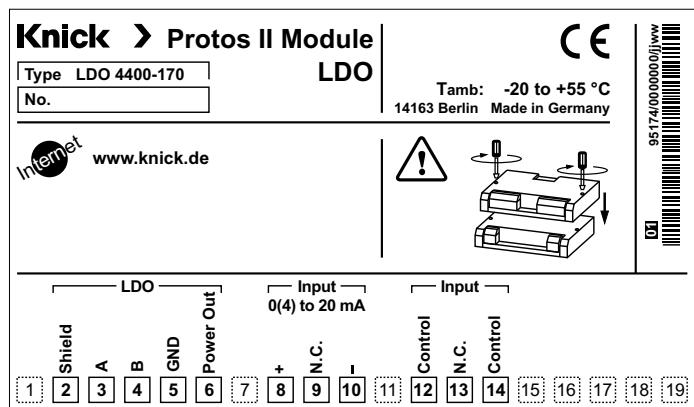

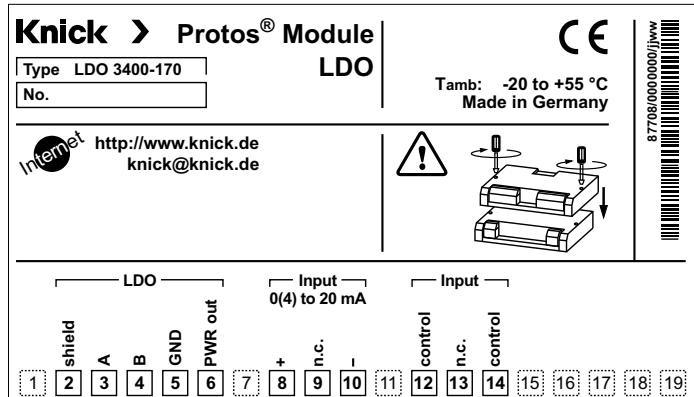

Press **menu** key, open Diagnostics menu: Device Description

Menu	Display	Device description
		<p><b>Device hardware and firmware version</b></p> <p>Provides information on all modules installed: Module type and function, serial number, hardware and firmware version, and device options.</p> <p>Select the different modules (FRONT, BASE, slots 1 - 3) using the arrow keys.</p>
		<p><b>Query module firmware</b></p> <p>Here: LDO 3400-170 module hardware and firmware version, serial number – here installed in slot 3.</p>

Note: The display may vary depending on the device version.

# Terminal Plate

## Terminal Plate of LDO 3400-170 / LDO 4400-170 Module:

## Attaching the Terminal Plates

The terminal plates of the lower modules can be stucked to the inner side of the door. This facilitates maintenance and service.

# Installing the Module

---

**⚠ CAUTION!** Electrostatic discharge (ESD).

The modules' signal inputs are sensitive to electrostatic discharge.

Take measures to protect against ESD before inserting the module and wiring the inputs.

**Note:** Strip the insulation from the wires using a suitable tool to prevent damage.

**NOTICE!** Moisture ingress.

The cable glands must be tightly sealed.

If necessary, use suitable filler plugs or sealing plugs.

- 1) Switch off the power supply to the device.
- 2) Open the device (loosen the 4 screws on the front).
- 3) Plug the module into the slot (D-SUB connector),  
see figure.
- 4) Tighten the module's fastening screws.
- 5) Connect the sensor cable.
- 6) Close the device by tightening the screws on the front.
- 7) Switch on the power supply

**Note:** Only one LDO module can be connected to the Protos.

# **Wiring**

---

---

## **Cable, e.g. CA/M12-005N485**

<b>Color</b>	<b>Assignment</b>	<b>Terminal number</b>
Cable strand		LDO 3400-170 module
White	PWR OUT (+)	6
Brown	GND (-)	5
Pink	RS 485 B	4
Gray	RS 485 A	3
Black	Schirm	2

The signal from an external pressure transmitter can be fed in through the external current input (terminals 8 and 10, see terminal plate on page 7). This allows pressure correction of the oxygen measurement.

# **Calibration / Adjustment**

---

**Note:** The function check (HOLD) mode is active for the currently calibrated module, the current outputs behave as configured.

## **Adjustment:**

The sensor adjusts itself. Adjustment is started and monitored via Protos.

### **NOTICE!**

Without adjustment every oxygen meter delivers an imprecise or wrong output value! After replacing the sensor or the sensor membrane, you must perform an adjustment.

## **Procedure**

Every oxygen sensor has its individual slope (Stern-Volmer constant cvs) and its individual zero point (phase angle). Both values are altered, for example, by aging.

For sufficiently high accuracy of oxygen measurement, the analyzer must be regularly adjusted for the sensor data (adjustment).

## **Calibration/Adjustment Methods**

- Automatic calibration in water/air
- Product calibration (saturation/concentration/partial pressure)
- Zero correction

# **Calibration / Adjustment**

---

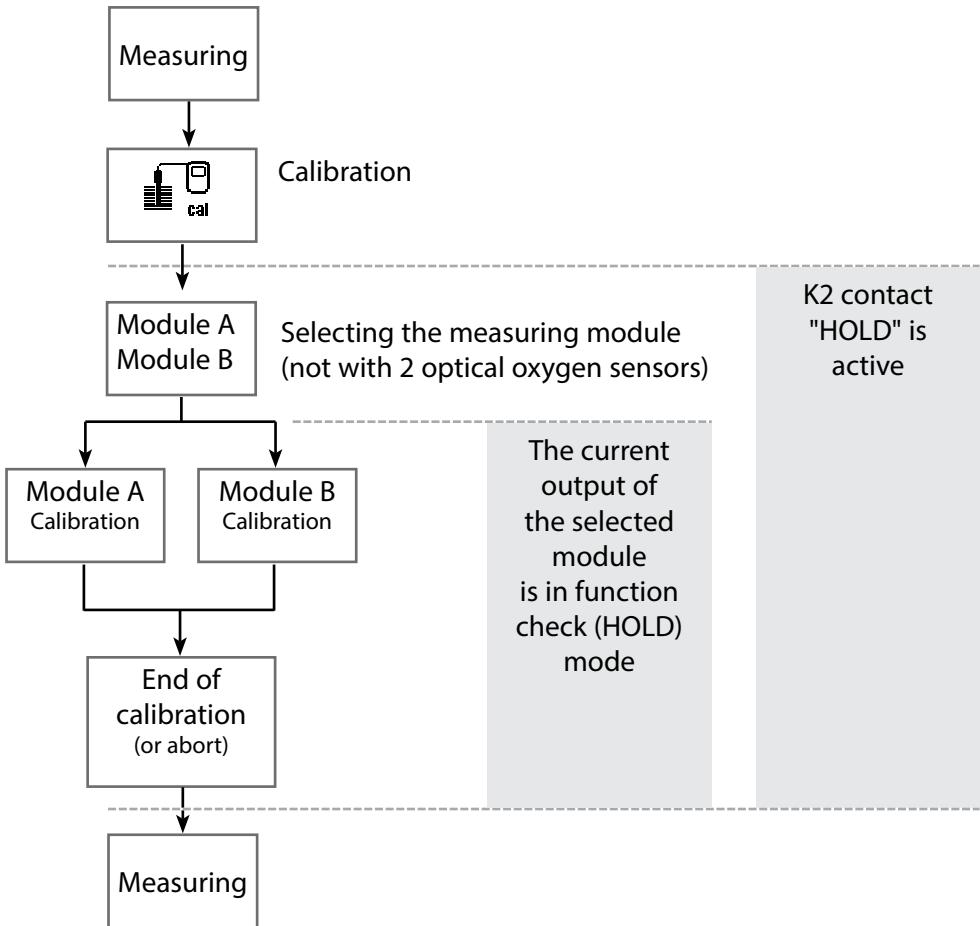

## **Recommendations for Calibration**

It is always recommended to calibrate in air. Compared to water, air is a calibration medium which is easy to handle, stable, and thus safe. In the most cases, however, the sensor must be removed for a calibration in air. In certain processes the sensor cannot be removed for calibration. Here, calibration must be performed directly in the process medium (e.g. by means of a product calibration).

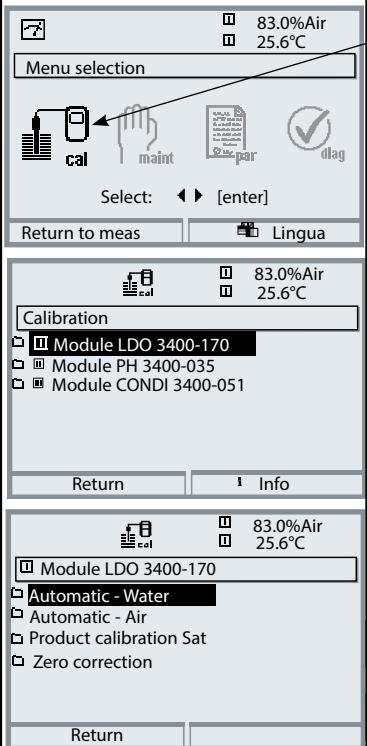

If there is a temperature difference between the calibration medium and the measured medium, you must keep the sensor in the respective medium for several minutes before and after calibration in order to achieve stable measured values. The type of calibration pressure detection is preset during parameter setting.

# HOLD Function During Calibration

Behavior of the signal and relay outputs during calibration

**Note:** The display may vary depending on the device version.

Menu	Display	Selecting a calibration method
		<p><b>Opening the Calibration Menu</b></p> <p>Press <b>menu</b> key to select menu. Select calibration using arrow keys, press <b>enter</b> to confirm, passcode 1147 (To change passcode, select: Parameter setting / System control / Passcode entry)</p> <p><b>Calibration:</b> Select LDO module</p> <p><b>Select a calibration method:</b></p> <ul style="list-style-type: none"><li>• Automatic - Water</li><li>• Automatic - Air</li><li>• Product calibration Sat (concentration/partial pressure)</li><li>• Zero correction</li></ul> <p>When you access calibration, the analyzer automatically proposes the previous calibration method. If you do not want to calibrate, "Return" with the left softkey.</p> <p><b>During calibration the module is in function check (HOLD) mode.</b> Current outputs and relay contacts of the module behave as configured (BASE module).</p>

# Calibration / Adjustment

## Automatic Calibration in Water

### Automatic Calibration in Water

The slope is corrected using the saturation value (100 %) of water in equilibrium with air.

**During calibration the module is in function check (HOLD) mode.**

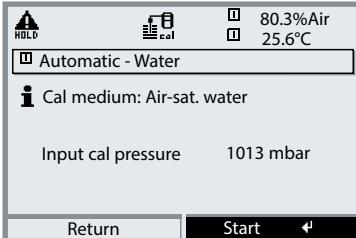

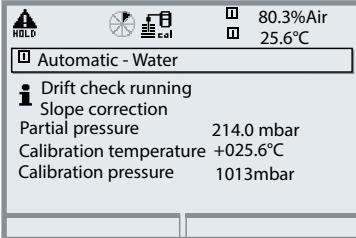

Current outputs and relay contacts of the module behave as configured (BASE module).

#### **NOTICE!**

The calibration medium must be in equilibrium with air. Oxygen exchange between water and air is very slow. Therefore, it takes a relatively long time until water is saturated with atmospheric oxygen. If there is a temperature difference between calibration medium and measured medium, you must keep the sensor in the respective medium for several minutes before and after calibration.

Note: The display may vary depending on the device version.

Menu	Display	Selecting a calibration mode
		<p><b>Select module:</b> The module is in function check (HOLD) mode. The assigned current outputs and relay contacts behave as configured (BASE). Press <b>enter</b> to confirm.</p>
		<p>Select "Automatic - Water" calibration method. Remove sensor and immerse it in cal medium (air-saturated water). Press <b>enter</b> to confirm.</p>

Menu	Display	Automatic calibration in water
 cal	 <p>80.3%Air 25.6°C</p> <p>Automatic - Water</p> <p>Cal medium: Air-sat. water</p> <p>Input cal pressure 1013 mbar</p> <p>Return Start</p>	<p>Display of selected calibration medium (Air-sat. water)</p> <p>Enter cal pressure if "manual" has been configured.</p> <p>Start with softkey or <b>enter</b></p>
	 <p>80.3%Air 25.6°C</p> <p>Automatic - Water</p> <p>Drift check running</p> <p>Slope correction</p> <p>Partial pressure 214.0 mbar</p> <p>Calibration temperature +025.6°C</p> <p>Calibration pressure 1013mbar</p>	<p>Drift check.</p> <p>Display during calibration</p> <ul style="list-style-type: none"><li>• Partial pressure</li><li>• Calibration temperature</li><li>• Calibration pressure</li></ul> <p>If the signal or the measured temperature fluctuate greatly, the calibration procedure is aborted.</p> <p>You must re-start the calibration.</p> <p>If successful, place sensor in process, exit calibration using softkey or <b>enter</b>.</p>

# Calibration / Adjustment

## Automatic Calibration in Air

### Automatic Calibration in Air

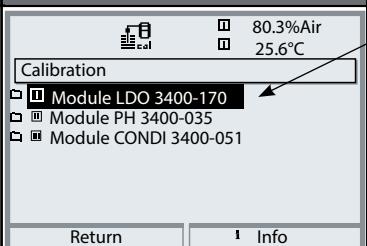

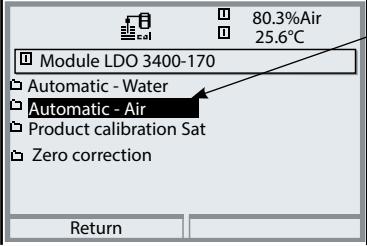

The slope is corrected using the saturation value (100 %), similar to air saturation of water. Since this analogy only applies to water-vapor saturated air (100 % relative humidity) and often the calibration air is less humid, the relative humidity of the calibration air must also be specified. If you do not know the exact value of the relative humidity of the calibration air, you can take the following reference values for a sufficiently precise calibration:

- Ambient air: 50 % rel. humidity (average)
- Bottled gas (synthetic air): 0 % rel. humidity

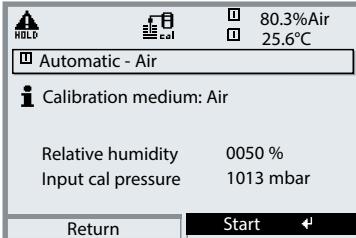

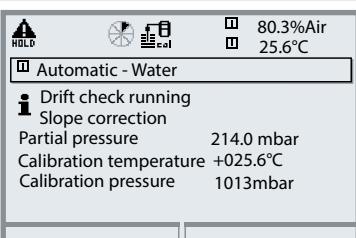

#### **NOTICE!**

The sensor membrane must be dry. Be sure to keep temperature and pressure constant during calibration. If there is a temperature difference between calibration medium and measured medium, you must keep the sensor in the respective medium for several minutes before and after calibration.

Note: The display may vary depending on the device version.

Menu	Display	Selecting a calibration mode
	 <p>80.3%Air 25.6°C</p> <p>Calibration</p> <ul style="list-style-type: none"><li>Module LDO 3400-170</li><li>Module PH 3400-035</li><li>Module CONDI 3400-051</li></ul> <p>Return Info</p>	<p><b>Select module:</b> The module is in function check (HOLD) mode. The assigned current outputs and relay contacts behave as configured (BASE). Press <b>enter</b> to confirm.</p>
	 <p>80.3%Air 25.6°C</p> <ul style="list-style-type: none"><li>Module LDO 3400-170</li><li>Automatic - Water</li><li><b>Automatic - Air</b></li><li>Product calibration Sat</li><li>Zero correction</li></ul> <p>Return</p>	<p>Select "Automatic - Air" calibration method</p> <p>Remove sensor and place it in air.</p> <p>Press <b>enter</b> to confirm.</p>

**Note:** The display may vary depending on the device version.

Menu	Display	Automatic calibration in air
	 <p>The display shows the calibration menu for air. It includes icons for HOLD, a graph, and a calibration symbol. The status bar shows 80.3% Air and 25.6°C. A sub-menu for "Automatic - Air" is open, showing "Calibration medium: Air". Below it, the relative humidity is listed as 0050 % and the input calibration pressure as 1013 mbar. At the bottom are softkeys for "Return" and "Start" with a right arrow.</p>	<p>Calibration medium: Air Select: First calibration Enter relative humidity, e.g.:<ul style="list-style-type: none"><li>• Ambient air: 50 %</li><li>• Bottled gas: 0 %</li></ul>Enter cal pressure if "manual" has been configured. Start with softkey or <b>enter</b></p>
	 <p>The display shows the calibration menu for water. It includes icons for HOLD, a graph, and a calibration symbol. The status bar shows 80.3% Air and 25.6°C. A sub-menu for "Automatic - Water" is open, showing "Drift check running" and "Slope correction". Below it, the partial pressure is listed as 214.0 mbar, the calibration temperature as +025.6°C, and the calibration pressure as 1013 mbar. At the bottom are softkeys for "Return" and "Start" with a right arrow.</p>	<p>Drift check. Display during calibration<ul style="list-style-type: none"><li>• Partial pressure</li><li>• Calibration temperature</li><li>• Calibration pressure</li></ul>If the signal or the measured temperature fluctuate greatly, the calibration procedure is aborted. You must re-start the calibration. If successful, place sensor in process, exit calibration using softkey or <b>enter</b>.</p>

# Calibration / Adjustment

Product Calibration (saturation/concentration/partial pressure [hPa, mmHg])

Preset in: Parameter setting / Cal preset values

## Product Calibration (Calibration with Sampling)

When the sensor cannot be removed – e.g. for sterility reasons – its slope can be determined with “sampling”. To do so, the currently measured process value is saved by the Protos. Directly afterwards, you determine a reference value using a portable meter, for example. Then, you enter this reference value into the process analysis system.

**During calibration the module is in function check (HOLD) mode.**

Current outputs and relay contacts of the module behave as configured (BASE module).

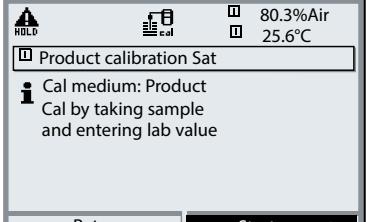

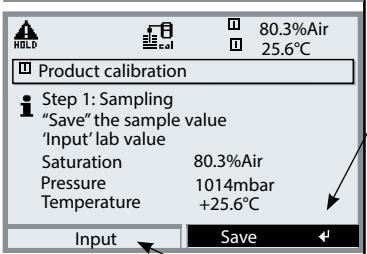

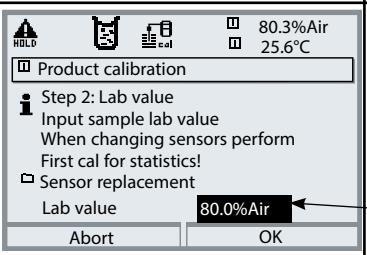

### NOTICE!

The reference value must be measured at temperature and pressure conditions similar to those of the process.

Note: The display may vary depending on the device version.

Menu	Display	Product calibration
	<p>72.5 % 25.6°C</p> <p>Calibration</p> <p>Module LDO 3400-170</p> <p>Return Info</p>	<p><b>Select module:</b> The module is in function check (HOLD) mode. The assigned current outputs and relay contacts behave as configured (BASE). Press <b>enter</b> to confirm.</p>
	<p>72.5 % 25.6°C</p> <p>Module LDO 3400-170</p> <p>Automatic - Water Automatic - Air <b>Product calibration</b> Zero correction</p> <p>Return</p>	<p>Select “Product calibration” calibration method. Sat (or Conc, p') is preset in Parameter setting / Cal preset values. Press <b>enter</b> to confirm.</p>

**Note:** The display may vary depending on the device version.

Menu	Display	Product calibration
	 <p>Product calibration Sat Cal medium: Product Cal by taking sample and entering lab value</p> <p>Return Start</p>  <p>Step 1: Sampling "Save" the sample value 'Input' lab value Saturation 80.3%Air Pressure 1014mbar Temperature +25.6°C</p> <p>Input Save</p>	<h3>Product Calibration</h3> <p>Product calibration is performed in 2 steps.</p> <p>Prepare reference measurement (e.g. using a portable meter), start with softkey or <b>enter</b>.</p> <p><b>Step 1</b> Take sample. Save measured value and temperature at the moment of sampling ("Save" softkey or <b>enter</b>). Press <b>meas</b> to return to measurement.</p> <p><b>Exception:</b> Sample value can be measured on the site and be entered immediately. To do so, press "Input" softkey.</p>
	 <p>Step 2: Lab value Input sample lab value When changing sensors perform First cal for statistics! Sensor replacement Lab value 80.0%Air</p> <p>Abort OK</p>	<p><b>Step 2</b> Lab value has been measured. When you open the Product calibration menu again, the display shown on the left appears: Enter reference value ("Lab value"). Confirm with "OK".</p>

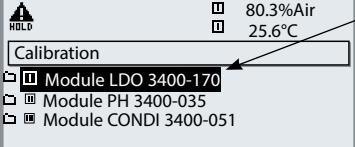

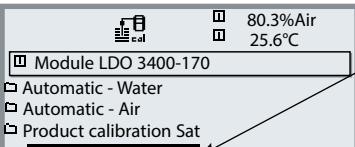

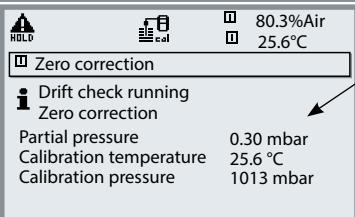

# Calibration / Adjustment

## Zero Correction

### Zero Correction

For trace measurements below 500 ppb, the zero point should be calibrated. If you want to perform a zero correction, then you should keep the sensor in the calibration medium (eg, N<sub>2</sub> or sulfite solution) until the measured value has stabilized. This may well take several minutes. After that, you can start the calibration process.

Note: The display may vary depending on the device version.

Menu	Display	Zero correction
	  	<p><b>Select module:</b> The module is in function check (HOLD) mode. The assigned current outputs and relay contacts behave as configured (BASE). Press <b>enter</b> to confirm.</p> <p>Select “Zero correction” calibration method.</p> <p>Press <b>enter</b> to confirm.</p> <p><b>Zero correction:</b> Display of partial pressure, calibration temperature and pressure. Confirm with “OK”.</p>

# Parameter Setting

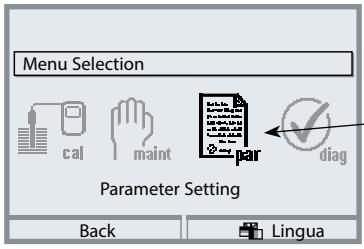

## ⚠ CAUTION!

Incorrect parameter setting, calibration or adjustment may result in incorrect measurements being recorded. Protos must therefore be commissioned by a system specialist, all its parameters must be set, and it must be fully adjusted.

## NOTICE!

The "function check" (HOLD) mode is active during parameter setting. The behavior of the current outputs depends on the parameter setting, i.e., they may be frozen at the last measurement or set to a fixed value. The red "Alarm" LED blinks.

Measurement operations must not be carried out while the Protos is in the function check (HOLD) mode, as this may put the user at risk due to unexpected system behavior.

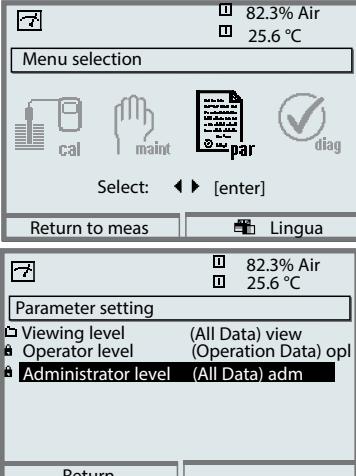

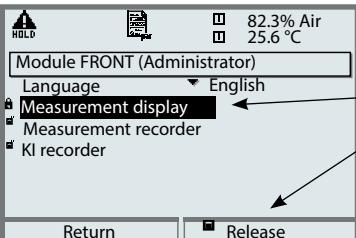

Menu	Display	Action
	 <p>The display shows a menu selection screen with the following options:</p> <ul style="list-style-type: none"><li>Menu Selection</li><li>cal</li><li>maint</li><li><b>Parameter Setting</b> (highlighted with a checkmark)</li><li>Back</li><li>Lingua</li></ul>	<p><b>Open the Parameter Setting menu</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select parameter setting using arrow keys, press <b>enter</b> to confirm</p>

# Parameter Setting: Operating Levels

Viewing level, Operator level, Administrator level

**Note:** Function check (HOLD) mode active (Setting: BASE module)

**Note:** The display may vary depending on the device version.

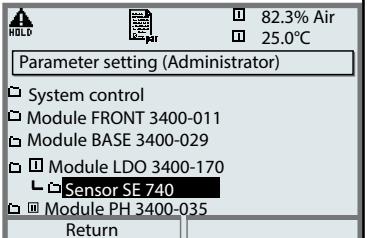

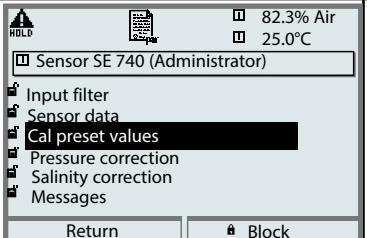

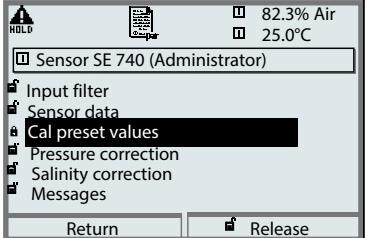

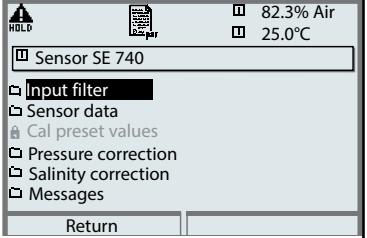

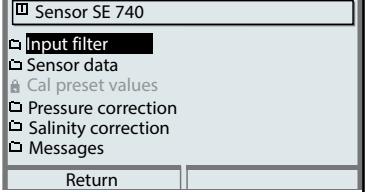

Menu	Display	Viewing level, Operator level, Administrator level
		<h3>Opening the Parameter Setting Menu</h3> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select parameter setting using arrow keys, press <b>enter</b> to confirm.</p>
		<h3>Administrator Level</h3> <p>Access to all functions, also passcode setting. Releasing or blocking functions for access from the Operator level.</p> <p>Functions which can be blocked for the Operator level are marked with the "lock" icon. The functions are released or blocked using the softkey.</p>
		<h3>Operator Level</h3> <p>Access to all functions which have been released at the Administrator level. Blocked functions are displayed in gray and cannot be edited (Fig.).</p> <h3>Viewing Level</h3> <p>Display of all settings. No editing possible!</p>

# Parameter Setting: Locking a Function

Administrator level: Enabling / locking functions for Operator level

**Note:** Function check (HOLD) mode active (Setting: BASE module)

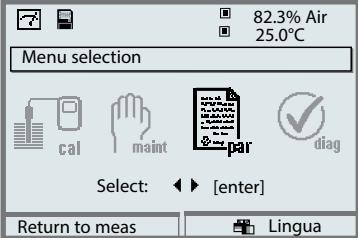

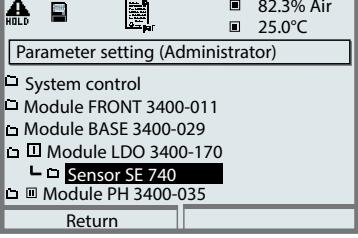

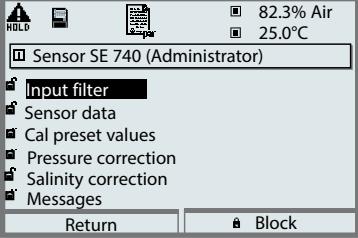

**Note:** The display may vary depending on the device version.

Menu	Display	Administrator level: Enabling / locking functions
		<b>Example:</b> Blocking calibration adjustments for the Operator level
		<b>Open the parameter setting menu</b> Select Administrator level. Enter passcode (1989). Select "Sensor SE 740" using arrow keys, press <b>enter</b> to confirm.
		Select "Cal preset values" using arrow keys, "Block" with softkey.
		Now, the "Cal preset values" line is marked with the "lock" icon. This function cannot be accessed from the Operator level any more. The softkey function changes to "Release".
		<b>Open the parameter setting menu</b> Select Operator level, passcode (1246), Select "Sensor SE 740", for example. Now, the locked function is displayed in gray and marked with the "lock" icon.

# Activating Parameter Setting

Opening the parameter setting menu

Note: The display may vary depending on the device version.

Menu	Display	Parameter setting
		<p><b>Opening the Parameter Setting Menu</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select parameter setting using arrow keys, press <b>enter</b> to confirm. Passcode as delivered: 1989</p>
		Select "Sensor SE 740", press <b>enter</b> to confirm.
		Select parameter using arrow keys, press <b>enter</b> to confirm.

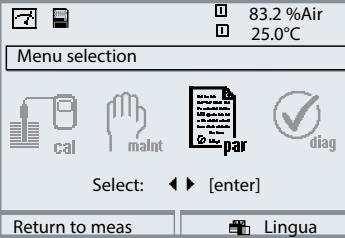

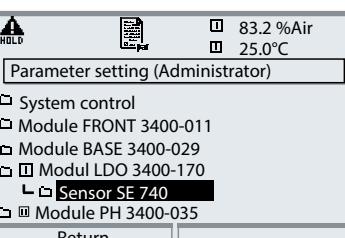

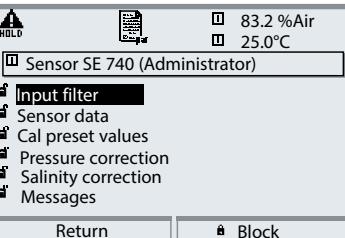

**During parameter setting the analyzer is in function check (HOLD) mode:**  
Current outputs and relay contacts behave as configured (BASE module).

# Setting the Sensor Data Parameters

Opening the parameter setting menu

**Note:** Function check (HOLD) mode active

**Note:** The display may vary depending on the device version.

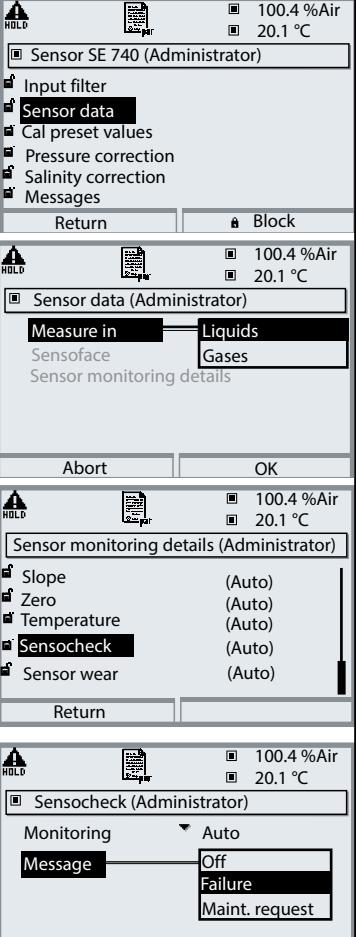

Menu	Display	Parameter setting
		<p><b>Opening the Parameter Setting Menu</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select parameter setting using arrow keys, press <b>enter</b> to confirm. Passcode 1989 (To change passcode: Parameter setting / System control / Passcode entry)</p>
		<p><b>HOLD</b></p> <p>During parameter setting the analyzer is in function check (HOLD) mode. Current outputs and relay contacts behave as configured (BASE module).</p>
		Select "Sensor SE 740". Press <b>enter</b> to confirm.

# Setting the Sensor Data Parameters

Sensor data: Sensor monitoring details

**Note:** Function check (HOLD) mode active

**Note:** The display may vary depending on the device version.

Menu	Display	Parameter selection
		<p><b>Sensor Data</b> (see following page) Sensor data are preset depending on the sensor type. Gray display lines cannot be edited.</p> <p><b>Sensoface</b> provides information on the sensor condition. Great deviations are signaled. Sensoface can be switched off.</p> <p><b>Sensor Monitoring Details</b> The following parameters are monitored: slope, zero, temperature, sensor wear, CIP/SIP counter, O<sub>2</sub> measurement with CIP/SIP, autoclaving counter and sensor operating time. For "Auto", the tolerance limits are displayed in gray. For "Individual", the settings can be specified by the user.</p> <p><b>Messages</b> Sensocheck can generate a message for failure or maintenance request. It can be seen in the Message list of the Diagnostics menu.</p>

**Note:** The menus may vary depending on the device version.

Parameter	Choices (default in bold print)
<b>Input filter</b>	
Pulse suppression	<b>Off</b> , Weak, Medium, Strong
Input filter	xxx s ( <b>10 s</b> )

Messages Partial pressure	<b>Off</b> , Variable limits

# Sensoface

Sensoface is a graphic indication of the sensor condition.

The "smileys" provide information on wear and required maintenance of the sensor ("friendly" - "neutral" - "sad").

## Sensoface Criteria

Slope (Stern-Volmer constant)	Permitted range: 0.0100 ... 0.0350
Zero point (phase angle)	Permitted range: 62° ... 75°
Sensocheck	Sensor defective (first remedy: remove and reconnect the sensor or replace the sensor cap)
Response time	> 1200 sec
Calibration timer	Reminds you to calibrate
Sensor wear	Try replacing the sensor cap

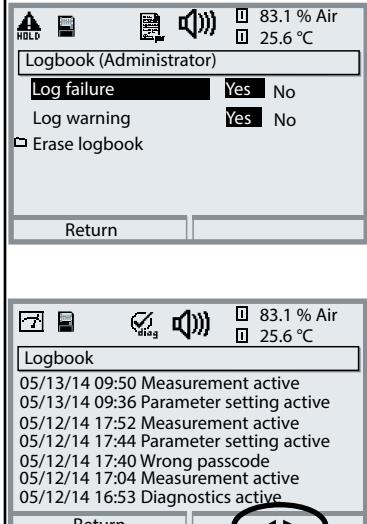

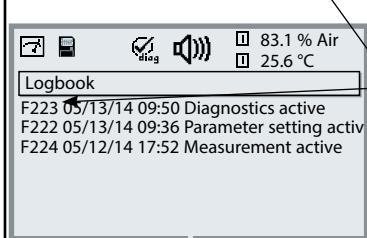

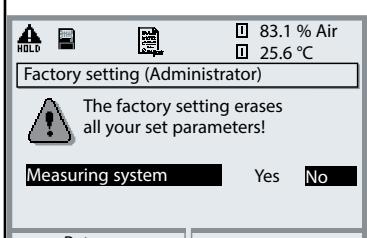

## Sensocheck:

The error information is taken from the sensor.

# Logbook, Factory Setting

Parameter setting/System control

**Note:** Function check (HOLD) mode active

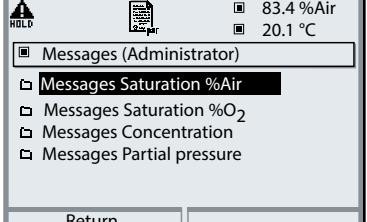

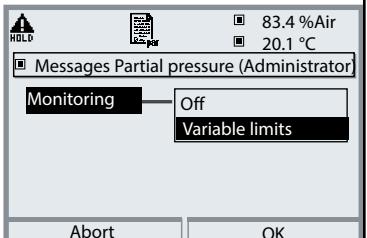

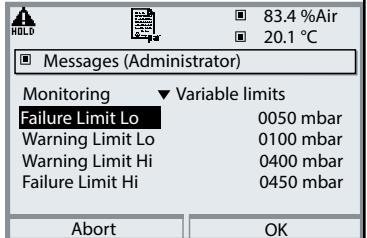

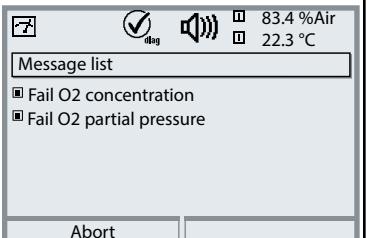

Menu	Display	Logbook, factory setting
	   	<p><b>Logbook</b></p> <p>Select which messages are to be recorded in the logbook.</p> <p>The logbook directly displays the last 50 events (Protos 3400) or 100 events (Protos II 4400) with date and time, e.g. calibrations, warning and failure messages, power failure.</p> <p>In addition, the add-on function SW3400-104/FW4400-104 allows max. 50,000 entries (with Protos 3400 and SmartMedia Card) or min. 20,000 entries (with Protos II 4400 and Data Card) to be saved on a memory card. The logbook entries can be called from the Diagnostics menu (Fig.).</p> <p>Pressing the right softkey displays the message identifier.</p> <p><b>Factory Setting</b></p> <p>Allows resetting the parameters to their factory setting.</p>

**Note:** The display may vary depending on the device version.

# Setting the Message Parameters

## Messages

**Note:** Function check (HOLD) mode active (Setting: BASE module)

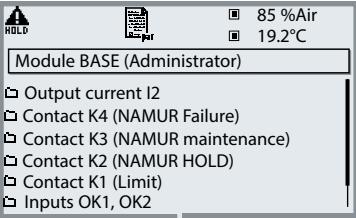

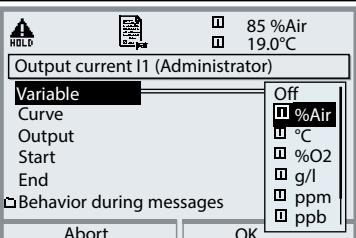

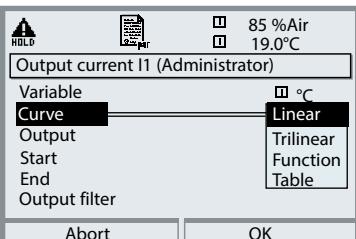

Menu	Display	Messages
	   	<p><b>Messages</b> All parameters determined by the measuring module can generate messages.</p> <p><b>Variable limits:</b> For the “failure” and “warning” messages you can define upper and lower limits for message generation.</p> <p><b>Message icons:</b></p> <ul style="list-style-type: none"><li>Failure (Failure limit HiHi/LoLo)</li><li>Maintenance (Warning limit Hi/Lo)</li></ul>
		<p><b>Diagnostics menu</b> When the “Maintenance” or “Failure” icons are blinking in the display, you should access the Diagnostics menu. The messages are displayed in the “Message list”.</p>

**Note:** The display may vary depending on the device version.

# Current Outputs

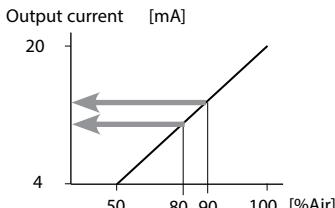

Select menu: Parameter setting/Module BASE

**Note:** Function check (HOLD) mode active (Setting: BASE module)

Menu	Display	Parameter setting BASE module
		<b>Configuring a Current Output</b> <ul style="list-style-type: none"><li>• Open parameter setting</li><li>• Enter passcode</li><li>• Select "Module BASE"</li><li>• Select "Output current ..."</li></ul>
		<ul style="list-style-type: none"><li>• Select process variable Liquids: ppm/ppb (gases: % vol/ppm vol): Start and end of current output can be set to the other process variable because also the measured value switches automatically. The decimal point can be moved using the arrow keys.</li></ul>
		<ul style="list-style-type: none"><li>• Select Curve, e.g. "linear": The process variable is represented by a linear output current curve. The desired range of the measured variable is specified by the values for "Start" and "End".</li></ul>

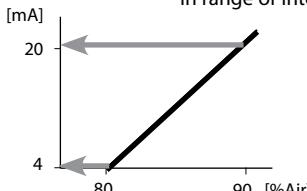

## Assignment of measured values: Start (4 mA) and end (20 mA)

Example 1: Range %Air 50 ... 100

Example 2: Range %Air 80 ... 90

Advantage: Higher resolution  
in range of interest

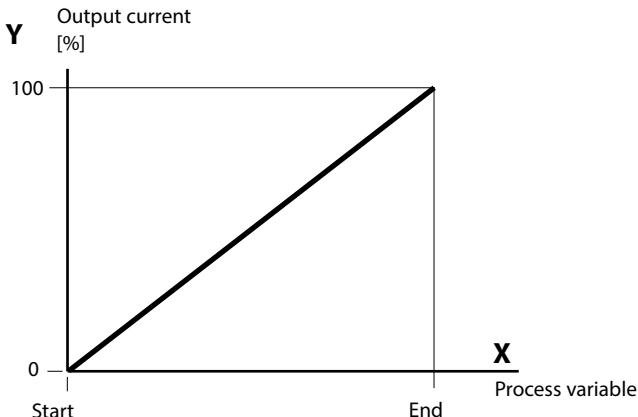

# Current Outputs: Characteristics

Select menu: Parameter setting/Module BASE

**Note:** Function check (HOLD) mode active

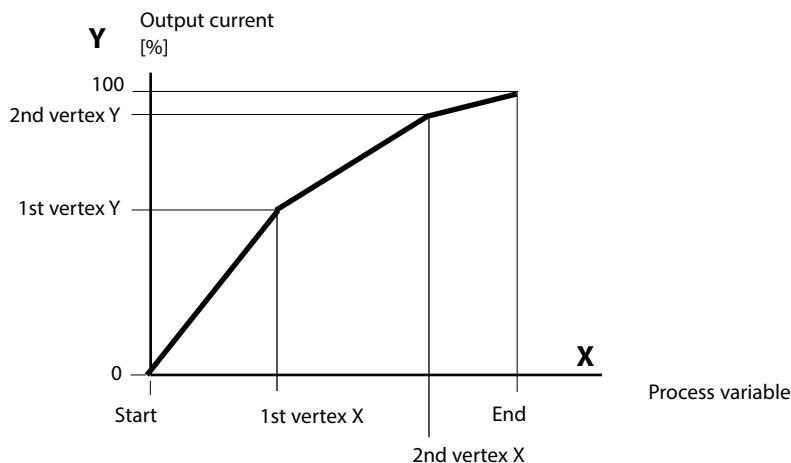

## • Linear characteristic

The process variable is represented by a linear output current curve.

## • Trilinear characteristic

Two additional vertices must be entered:

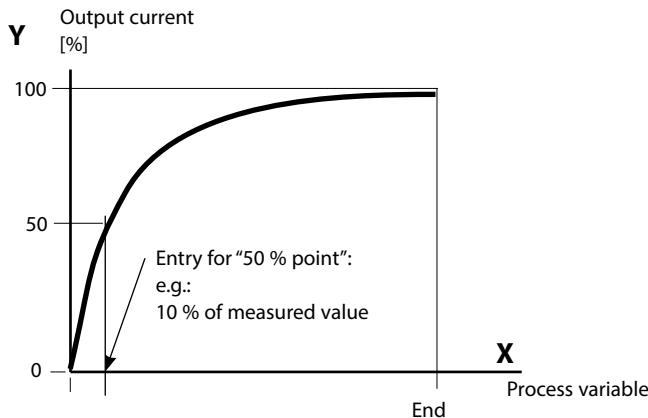

## • Note: Bilinear characteristic

For a bilinear characteristic, identical parameters are entered for the two vertices (1st vertex, 2nd vertex).

## • Function characteristic

Nonlinear output current characteristic: allows measurements over several decades, e.g. measuring very low values with a high resolution and high values with a low resolution.

Required: Entering a value for 50 % output current.

## Equation

$$\text{Output current (4 to 20 mA)} = \frac{(1+K)x}{1+Kx} \quad 16 \text{ mA} + 4 \text{ mA}$$

$$K = \frac{E + S - 2 * X50\%}{X50\% - S} \quad x = \frac{M - S}{E - S}$$

S: Start value at 4 mA

X50%: 50% value at 12 mA (output current range 4 to 20 mA)

E: End value at 20 mA

M: Measured value

### Logarithmic output curve over one decade:

S: 10 % of maximum value

X50%: 31.6 % of maximum value

E: Maximum value

### Logarithmic output curve over two decades:

S: 1 % of maximum value

X50%: 10 % of maximum value

E: Maximum value

# Current Outputs: Output Filter

Select menu: Parameter setting/Module BASE/Output current I.../Output filter

**Note:** Function check (HOLD) mode active

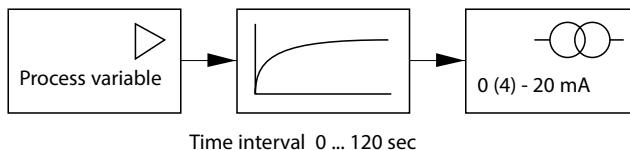

## Time averaging filter

To smoothen the current output, a low-pass filter with adjustable time interval can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time interval has been reached.

The time interval can be set from 0 to 120 sec. If the time interval is set to 0 sec, the current output follows the input.

### Note:

The filter only acts on the current output and the current value of the secondary display, not on the measurement display, the limit values or the controller!

### Note:

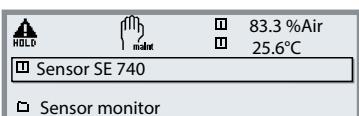

For further BASE module settings (behavior during messages, contacts, opto-coupler inputs) refer to the user manual of the basic device.

# Maintenance

Sensor monitor, autoclaving counter

**Note:** Function check (HOLD) mode active (Setting: BASE module)

**Note:** The display may vary depending on the device version.

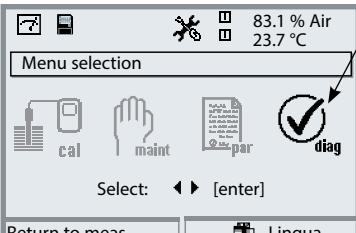

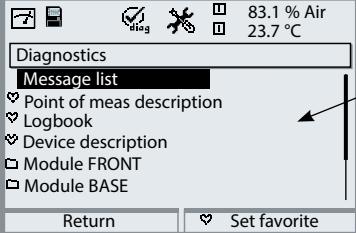

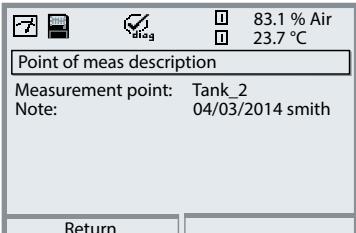

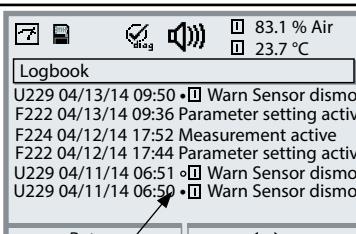

Menu	Display	Maintenance
	 <p>83.3 %Air 25.6°C</p> <p>Menu selection</p> <p>Select: ▲ ▼ [enter]</p> <p>Return to meas Lingua</p>	<h3>Opening the Maintenance Menu</h3> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select Maintenance (maint) using arrow keys, press <b>enter</b> to confirm. Passcode 2958 (The passcode can be edited by the administrator.)</p>
	 <p>83.3 %Air 25.6°C</p> <p>Maintenance</p> <ul style="list-style-type: none"><li>Module BASE 3400-029</li><li>Module LDO 3400-170<ul style="list-style-type: none"><li>Sensor SE 740</li></ul></li></ul>	<p>Then select "Sensor SE 740".</p>
	 <p>83.3 %Air 25.6°C</p> <p>Sensor SE 740</p> <ul style="list-style-type: none"><li>Sensor monitor</li><li>Autoclaving counter</li></ul>	<h3>Sensor Monitor</h3> <p>You can use the sensor monitor to validate the sensor by immersing it in a solution with known oxygen concentration, for example, and then checking the values measured.</p>

# Diagnostic Functions

General status information of the measuring system

Select menu: Diagnostics

Note: The display may vary depending on the device version.

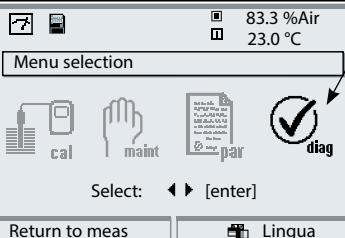

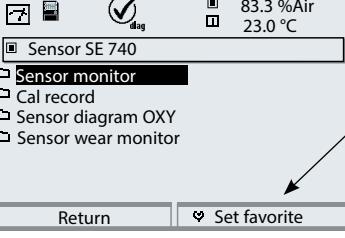

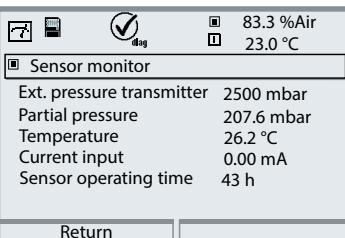

Menu	Display	Diagnostic functions
		<b>Opening the Diagnostics Menu</b> From the measuring mode: Press <b>menu</b> key to select menu. Select diagnostics using arrow keys, confirm by pressing <b>enter</b> .
		The "Diagnostics" menu gives an overview of all functions available. Functions which have been set as "Favorite" can be directly accessed from the measuring mode.
		<b>Point of Meas Description</b> Allows entering a tag number and a note. Select position: left/right arrow key, select character: up/down arrow key. Press <b>enter</b> to confirm the entry.
		<b>Logbook</b> The logbook directly displays the last 50 events (Protos 3400) or 100 events (Protos II 4400) with date and time, e.g. calibrations, warning and failure messages, power failure. For parameter setting, see p. 30.

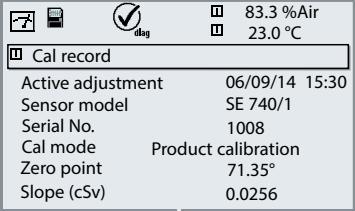

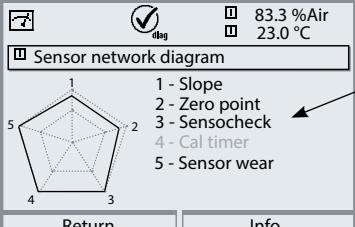

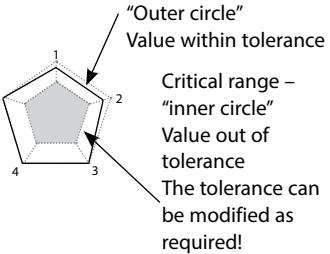

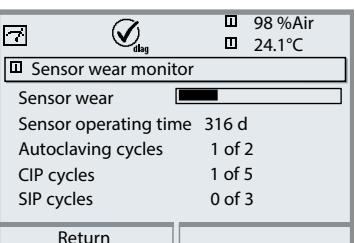

Menu	Display	Diagnostic functions
	 	<b>Device Description</b> Select module using arrow keys: Provides information on all modules installed: Function, serial number, hardware and software version, and device options.
	 	<b>FRONT Module</b> The module contains the display and keypad control. Test possibilities: <ul style="list-style-type: none"> <li>Module diagnostics</li> <li>Display test</li> <li>Keypad test</li> </ul>
		<b>BASE Module</b> The module generates the standard output signals. Test possibilities: <ul style="list-style-type: none"> <li>Module diagnostics</li> <li>Input/output status</li> </ul>
		Example: Module BASE, input/output status.

# Module Diagnostics

Diagnostics / Module LDO ...

Note: The display may vary depending on the device version.

Menu	Display	Sensor monitor
 diag	 	<p><b>Opening the Diagnostics Menu</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select diagnostics using arrow keys, confirm by pressing <b>enter</b>. Then select the LDO module.</p>
		<p>The Diagnostics menu gives an overview of all diagnostics functions available. <u>Messages set as "Favorite"</u> can be called directly from the measuring mode using a softkey.</p> <p>To configure, select: Parameter setting / System control / Function control matrix.</p>
		<p><b>Sensor Monitor</b></p> <p>Shows the data provided by the sensor.</p> <p>Important function for diagnostics and validation!</p>

Menu	Display	Cal record, Sensor diagram, Sensor wear monitor
	 <input data-bbox="234 398 290 419" type="button" value="Return"/>	<h3>Cal Record</h3> <p>Data of last calibration, suitable for documentation to ISO 9000 and GLP</p>
	 <input data-bbox="234 652 290 673" type="button" value="Return"/> <input data-bbox="445 652 468 673" type="button" value="Info"/> 	<h3>Sensor Diagram</h3> <p>The measured values are continuously monitored during the measurement process. The sensor network diagram provides at-a-glance information about critical parameters. If a tolerance limit has been exceeded, the respective parameter is flashing. Values in gray: Monitoring switched off.</p>
	 <input data-bbox="234 1187 290 1208" type="button" value="Return"/>	<h3>Sensor Wear Monitor</h3> <p>In addition to the current sensor wear, the sensor operating time is displayed. The numbers of autoclave, CIP, and SIP cycles are displayed when you have entered corresponding maximum values in the "Sensor monitoring details" menu.</p>

# **CIP/SIP Cycles, Autoclaving Counter**

---

## **CIP (Cleaning in Place) / SIP (Sterilization in Place)**

CIP/SIP cycles are used for cleaning or sterilizing the process-wetted parts in the process. They are performed for biotech applications, for example. Depending on the application, one (alkaline solution, water) or more chemicals (alkaline solution, water, acidic solution, water) are used. The temperatures for CIP are around 80 °C, for SIP around 110 °C. These procedures extremely stress the sensors.

The device automatically recognizes the CIP and SIP cycles and correspondingly increments the counter. The user can specify the max. number of cycles in the "Sensor monitoring details" menu and decide whether a message is to be generated when this number is exceeded.

These data are not stored in the sensor and cannot be reset.

The number of cycles is shown in the sensor wear monitor of the Diagnostics menu when an individual max value has been specified.

## **Autoclaving Counter**

After reaching a specified limit value, the autoclaving counter generates a Sensoface message. As soon as the counter has reached the specified value, Sensoface is getting "sad". After each autoclaving process, you must manually increment the autoclaving counter in the Maintenance menu.

# Setting Diagnostic Messages as Favorite

Select menu: Parameter setting / System control / Function control matrix

## Secondary Displays (1)

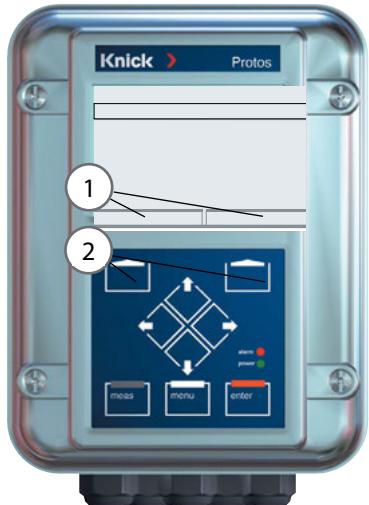

Here, additional values are displayed in the measuring mode according to the factory setting. When the respective softkey (2) is pressed, the process variables measured by the modules plus date or time are displayed. In addition, you can use the **softkeys (2)** to control functions.

To assign a function to a softkey, select

## Parameter setting/System control/ Function control matrix

Function which can be controlled by softkeys:

- Parameter set selection
- KI recorder Start/Stop<sup>1)</sup>
- Favorites
- Unical (fully automated probe controller)<sup>2)</sup>

		98.1 %Air
		25.6°C
Function control matrix (Administrator)		
Input OK2	<input type="radio"/>	<input type="radio"/>
Left softkey	<input type="radio"/>	<input checked="" type="radio"/>
Right softkey	<input type="radio"/>	<input checked="" type="radio"/>
Profibus DO 2	<input type="radio"/>	<input type="radio"/>
<a href="#">Return</a>	<a href="#">Connect</a>	

## Favorites

Selected Diagnostics functions can be called directly from the measuring mode using a softkey.

The table on the next page explains how to select favorites.

Example:  
"Favorites" to be selected with  
"Right softkey"

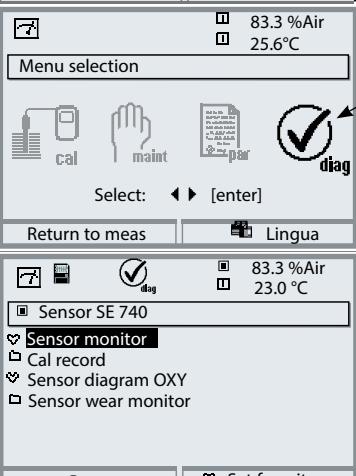

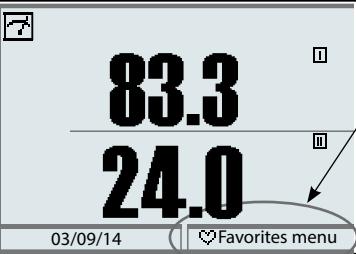

To select a softkey function:  
Select desired function  
using arrow keys,  
press "Connect" softkey  
and confirm with **enter**.

To deselect a function:  
Press "Disconnect" softkey,  
confirm with **enter**.

1) With Protos 3400(X)

2) With Protos II 4400(X) from firmware version 2.

**Note:** The display may vary depending on the device version.

Menu	Display	Selecting a favorite
		<b>Favorites Menu</b> Diagnostics functions can be called directly from the measuring mode using a softkey. The "Favorites" are selected in the Diagnostics menu.
		<b>Selecting a Favorite</b> Press <b>menu</b> key to select menu. Select Diagnostics using arrow keys, press <b>enter</b> to confirm. Then select the module and confirm by pressing <b>enter</b> .
		Set/delete favorite: "Set favorite" allows activation of the selected diagnostic function directly from the measuring mode via softkey. The menu line is marked with a heart icon.
		Pressing the <b>meas</b> key returns to measurement. When the softkey has been assigned to "Favorites", "Favorites menu" is read in the secondary display (see "Function control matrix").

### Note:

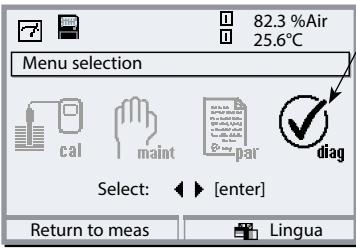

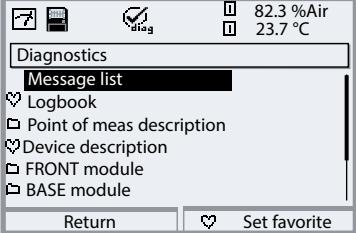

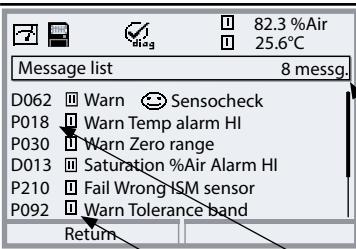

When one of the softkeys has been assigned to the "Favorites menu" function, diagnostic functions which have been set as "Favorite" can be directly called from the measuring mode.

# Diagnostic Functions

General status information of the measuring system

Select menu: Diagnostics - Message list

Note: The display may vary depending on the device version.

Menu	Display	Diagnostic functions
		<p><b>Opening the Diagnostics Menu</b> From the measuring mode: Press <b>menu</b> key to select menu. Select diagnostics using arrow keys, press <b>enter</b> to confirm.</p>
		<p>The “Diagnostics” menu gives an overview of all functions available. Functions which have been set as “Favorite” can be directly accessed from the measuring mode.</p>
		<p><b>Message List</b> Shows the currently activated warning or failure messages in plain text.</p> <p><b>Number of messages</b> When there are more than 7 messages, a vertical scrollbar appears. Scroll with the up/down arrow keys.</p> <p><b>Message identifier</b> See message list for description.</p> <p><b>Module identifier</b> Specifies the module that has generated the message.</p>

## **Minimum Spans for Current Outputs**

The LDO 3400-170/4400-170 module is a measuring module. It does not provide current outputs. Current outputs are provided by the BASE module (basic device) or by communication modules (e.g. OUT, PID). The corresponding parameters must be set there.

The minimum current span shall prevent that the resolution limit of the measurement technology ( $\pm 1$  count) is seen in the current.

### **LDO Module**

%air	0.1
%O <sub>2</sub>	0.1
°C	10.0
mg/l	2 µg/l

# Overview

## Overview of Parameter Setting

Note: The menus may vary depending on the device version

## Parameter Setting Menu

### Parameter Setting

From measuring mode: Press **menu** key to select menu.

Select parameter setting using arrow keys,

press **enter** to confirm.

#### Administrator level

Access to all functions, also passcode setting. Releasing or blocking functions for access from the Operator level.

#### Operator level

Access to all functions which have been released at the Administrator level. Blocked functions are displayed in gray and cannot be edited.

#### Viewing level

Only display, no editing possible!

## System Control

Memory card (Option)	Menu only appears when a memory card is inserted and the corresponding add-on function has been enabled.
Transfer configuration	The complete configuration of a device can be written on a memory card. This allows transferring all device settings to other devices with identical equipment (exception: options and passcodes).
Parameter set	2 parameter sets (A, B) are available in the device. The currently active parameter set is shown in the display. Parameter sets contain all settings except: sensor type, options, system control settings Up to 5 parameter sets (1, 2, 3, 4, 5) are available when a memory card (Option) is used.
Function control	Select the functions to be controlled via softkeys and OK inputs
Time/date	Time, date, display format
Meas. point description	Free input of a tag number, can be called from the diagnostics menu
Release of options	Option activation via TAN
Reset to default	Reset all parameters to factory setting
Passcode entry	Change passcodes
Firmware update	Update the firmware using an Update Card
Logbook	Select the events to be recorded

Cal record

Sensor diagram

Sensor wear monitor

Internal function test

Shows the values currently measured by the sensor

Data of last adjustment / calibration

Graphical representation of the sensor parameters

Display of sensor wear, CIP, SIP, autoclaving counter

# **Index**

---

## **A**

Adjustment 10  
Administrator level 22  
Assigning measured values, start (4 mA) and end (20 mA) 32  
Attaching the terminal plates 7  
Autoclaving counter, description 41  
Autoclaving counter, maintenance 36  
Automatic calibration in air 16  
Automatic calibration in water 14

## **B**

Behavior during messages 35  
Bilinear characteristic 33

## **C**

Calibration 10  
Calibration with sampling 18  
Cal record 40  
CIP (Cleaning in Place) 41  
Connecting the module 8  
Connection assignment 9  
Contacts, parameter setting 35  
Current outputs 32  
Current outputs, characteristics 33  
Current outputs, minimum spans 55

## **D**

Device description 38  
Device firmware 6  
Diagnostic messages 44  
Diagnostic messages as favorite 42  
Diagnostics 37  
Disposal 2
